

# NIRANJAN VSKS Senior Agentic AI Engineer

 niranjan.vsk@gmail.com    +91 7893312735    Hyderabad, India    niranjanvsk.xyz    linkedin.com/in/niranjanvsk

## Summary

Senior agentic AI engineer who ships into enterprise environments end to end ,cold start discovery, architecture, implementation, and deployment. Seven years across data science, GenAI, and agentic AI, with engineering depth across LLMs, GraphRAG, multi-agent systems, LLM observability, and full-stack delivery. Operate equally well on solo builds and embedded inside customer engineering teams.

## Experience

**Senior Engineer - GenAI & Agentic AI, Coforge** 03/2024 – Present | Hyderabad

- Architected and shipped an AI-Infused Agentic Quality Engineering Platform end-to-end, from feasibility framing through production rollout to **17 enterprise QA teams at peak adoption**. Deployed across customer-managed AWS, Azure, and GCP environments, adapting architecture and identity to each tenant's cloud ecosystem.
- Drove production **hallucination from ~15% to under 5%** by engineering advanced RAG pipelines from scratch: GraphRAG on Neo4j with entity normalization, query transformation, re-ranking, context compression, metadata filtering, query rerouting, and guardrails. Layered Agentic RAG over Jira and Azure DevOps to retrieve linked stories, epics, and acceptance criteria and scope test generation.
- Cut manual QA effort 85-90%** through agentic test generation, execution, and CI-integrated automation, and built a custom Playwright MCP integration that generates production-grade Playwright and Cypress scripts from natural language, **reducing test authoring time ~75%**.
- Engineered an LLM observability layer with per-tenant cost telemetry and quality evaluation (Acceptance Criteria Coverage, Test Design Coverage, RAGAS), and built tenant-aware RBAC with module-level CRUD-X permissions and role templates that onboard new customers **without rebuilding permissions**.

**Data Scientist - GenAI, ML & Conversational AI, Hewlett Packard Enterprise** 11/2022 – 12/2023 | Bangalore

- Architected the migration of an enterprise conversational system from rule-based FAQ to LLM-assisted RAG over a corpus of ~1,500-1,700 internal documents, **cutting repeat user escalations ~40%**.
- Designed the retrieval pipeline end-to-end: chunking with overlap calibration, hybrid search combining **semantic** and **keyword signals**, and metadata filtering tuned for enterprise-jargon queries. Added evaluation loops measuring retrieval precision against a held-out set, **improving response relevance 30-40%** in pilot.
- Built the case for the retrieval-augmented redesign through customer usage analysis, which showed the rule-based system failing on anything outside its predefined set. Owned the rollout end-to-end.

**Associate Software Engineer - Machine Learning & Data Science, Mphasis** 07/2019 – 10/2022 | Bangalore

- Built fraud-detection and risk-scoring models for financial-services clients using tree-based ensembles (XGBoost, LightGBM, Random Forest) with engineered feature pipelines, **improving precision ~15% over legacy rule-based systems** and cutting manual review volume.
- Developed predictive-analytics models and live streaming dashboards on investment data, enabling portfolio teams to act on signals without batch-reporting delays.

## Education

**Product Management in Generative & Agentic AI, BITS School of Management (BITSoM)** 07/2025 – 03/2026 | India

**PG Diploma in Machine Learning & Artificial Intelligence, IIIT Bangalore** 06/2020 – 03/2022 | Bangalore

**Bachelor of Technology in Computer Science, Bharat Institute of Engineering and Technology** 08/2015 – 06/2019 | Hyderabad

## Skills

**Generative & Agentic AI:** LLMs | Prompt Engineering | Agentic Workflows | Multi-Agent Orchestration | LangGraph | LangChain | GraphRAG | Agentic RAG Pipelines | Neo4j | Hybrid Search | Reranking | MCP Servers | LLM Observability | Context Engineering | RAGAS | Guardrails | Responsible AI

**Enterprise & Customer-Facing:** Forward Deployed Engineering | Solutions Architecture | Customer Discovery | Stakeholder Alignment | Production Deployment | Multi-Tenant Architecture | RBAC Design | Enterprise CRM Integration | Identity & SSO Architecture | OAuth Protocols | Customer-Facing Technical Communication | Product-Informed Engineering Judgment

**ML & Data Science:** Tree-Based Ensembles (XGBoost, LightGBM, Random Forest) | Feature Engineering | Predictive Analytics | Risk Scoring | Statistical Modeling

**Engineering & Delivery:** Python | FastAPI | React 19 | MongoDB | PostgreSQL | Docker | CI/CD (Harness, GitHub Actions, Railway) | Cloud Platforms (Azure, GCP, AWS) | System Design | Data Pipelines | REST APIs | Webhook Architecture | Async Architecture | Microservices | Playwright | Cypress

## Projects

**Loop Copilot : AI CRM Copilot for Enterprise Sales, Architect · Engineer · Sole Owner | Production, Fortune 500 pilot**

- Built and shipped a production AI CRM copilot for enterprise sales reps as **sole architect and engineer**, taking it from customer discovery through V2 with an active beta user inside a Fortune 500 sales org, **cutting CRM logging time from 4-6 min to ~45 sec (~85%)**.
- Designed the D365 integration within the **customer's tenant trust model**, using Power Automate flows authenticated by internal tenant identity, with direct Dataverse REST via MSAL held in reserve for broader-permission environments. Architected for cross-environment portability from day one.
- Architected the full stack (React 19, async FastAPI, MongoDB Atlas, Groq/Llama 3.1, Entra ID via MSAL, Microsoft Graph, Telegram Bot API, Railway CI/CD), using structured **event sourcing in place of vector RAG** to eliminate hallucinated memory while preserving cross-session context.

- Shipped **V2 in a single sprint across 10+ feature areas**: calendar integration, bulk activity upload with AI summarization, Telegram alerts, and admin analytics, with a multi-CRM expansion shell (Salesforce, HubSpot, Zoho) architected and ready.
- Voice-First Financial AI Copilot**, *Capstone, BITSoM : Architected, Built & Piloted*
- Owned end-to-end architecture and delivery of a voice-first financial AI copilot for India's gig workforce, from customer research through pilot, shipping a **~30-screen MVP with 10-language architecture**.
  - Designed a **multi-layer compliance architecture**: RAG over a regulatory-safe knowledge base, system-prompt guardrails, server-side governance, and consent-first data handling, built against SEBI advisory principles and DPDP requirements as first-class design constraints.
  - Surfaced through user research that the core need was **confidence against exploitation, not data access**, restructuring the product toward trust-building. Hit **~55% repeat usage** in a first-week pilot (~15 users).

**Autonomous Investment Portfolio Rebalancing Agent**, *Multi-Asset Agentic Application | Architect. Engineer. Owner | Ongoing*

- Architected an autonomous multi-asset rebalancing agent (stocks, mutual funds, ETFs, bonds, NPS) integrating **live broker data via Model Context Protocol** to detect allocation drift against target weights and surface rebalancing recommendations.
- Engineered an **11-signal decision framework** spanning macro indicators, sector rotation, earnings calendar, volatility regime, liquidity, tax efficiency, and user risk constraints, with configurable position-size limits to prevent over-concentration.

## Certifications

---

**Agile Practices Certificate**  
SAFe

**Claude Certified Architect**  
Anthropic : In-Progress
