

New Portfolio Fixes Now

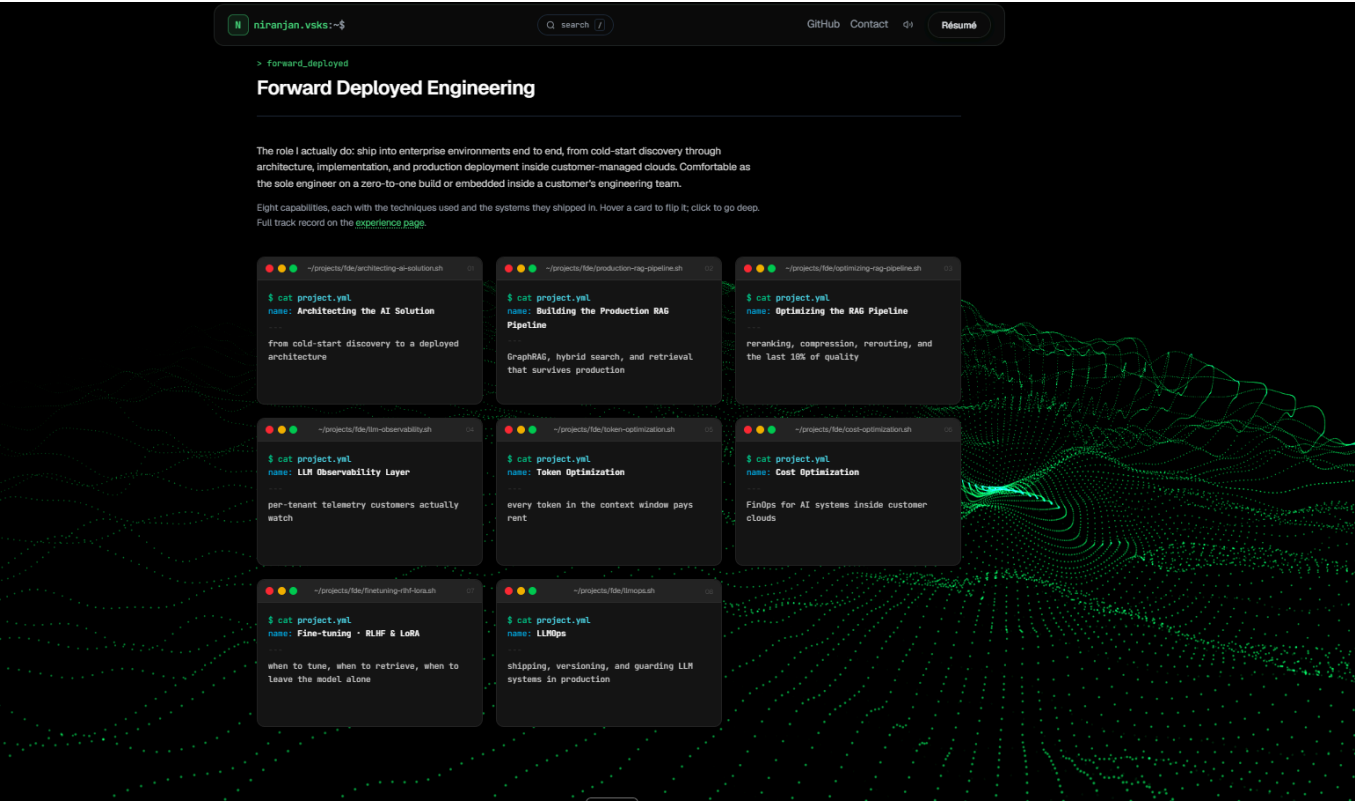

First thing this is glaring too much and Looking Weird , Keep the Starfield outer space Background and keep the Starman Template on the right , maybe a little bigger than the Landing page size but not too huge to look weird , and also The Size of these Cards can be slightly Increased , Also Add a New Section Called Work with me , something Like Hire me or something (Add a Professional Wording) so on click of that button It Opens their Mail and Sends a Mail to me on niranjan.vks@gmail.com with a Mail saying We want to work with you . and we will schedule an interview , so we will give user an editable popup view where he can edit the mail he wants to send me . With a Send mail button , Usually it is either an Outlook Or Gmail so we can give user option as well .

Also this section is looking very Bland . The font is not readable , make it a little readable with maybe a few cards and stuff , and the Why FDE deserves a little more data .

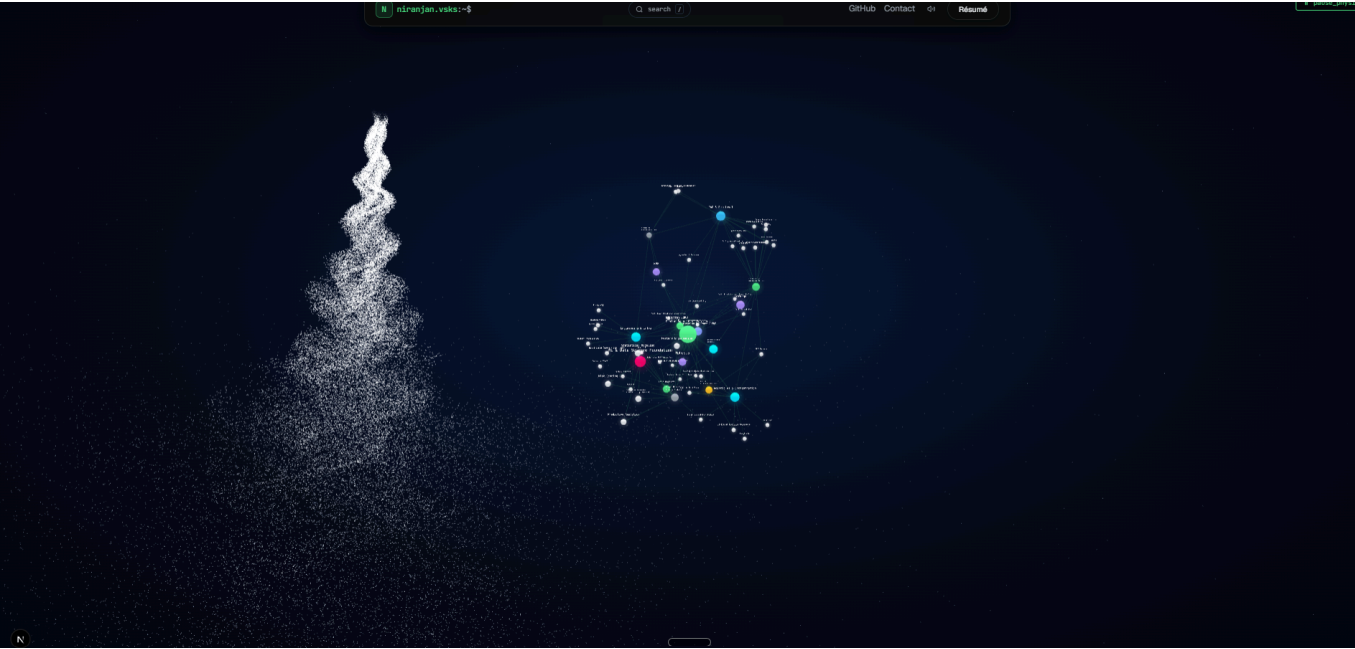

Also In here also the Cards size can be increased . or either the TITLE CAN BE CAPITALIZED AND FONT SIZE ALSO CAN BE INCREASED A LITTLE , and Add another additonal on hover action that it will expand and increase in size as well (zoom in) and the flip effect should also be there that is two actions both flip and expand . Expand first and then flip and as long as he is hovering on it , it shouldnt zoom out but it can keep flipping back after 5-8 seconds , keeping

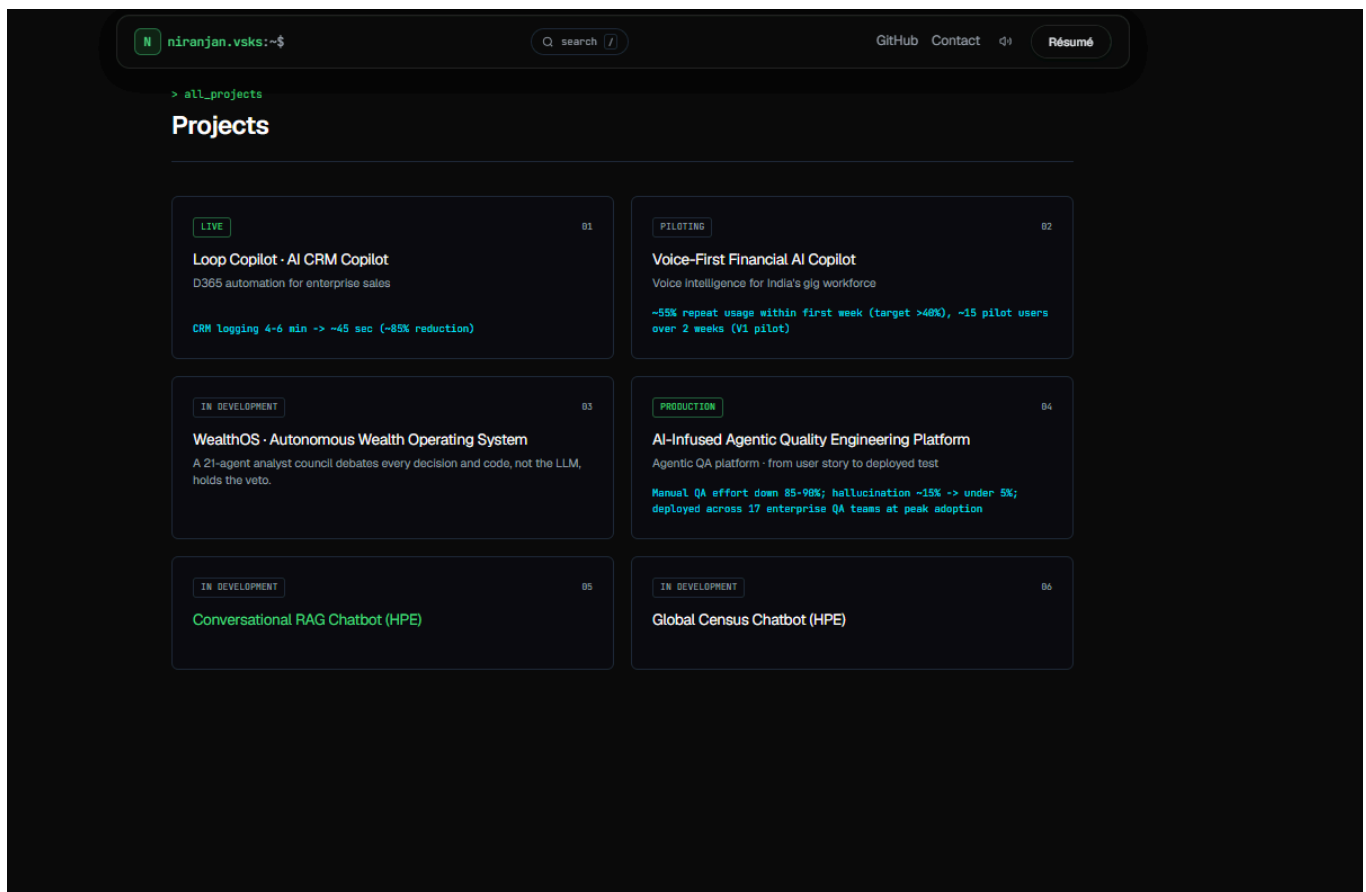

the zoomin.

Also in the Mindmap , Plume template isnt going well , remove it , just Keep the Starfield intense add more star density maybe but remove everything else and I told you when the brain transitions into the mindmap and mindmap is loaded the mindmap must be zoomed in a little its looking very small and user is having to zoom himself which is not a good UX. :

Also this page , the cards must be Terminal Styled :

In the Project page , The Description must not be there in the Box let it be directly on the screen and also Increase font size to be readable and eye catching :
