

LAST AND FINAL NOW

Autonomous Codebase intelligence :

The framing of this is the shittiest, most defensive, very underconfident, and very lazy framing ever.

"A Fable 5 orchestrator runs a fleet of specialist agents over a codebase it has never seen, reconciles their findings, and routes the approved ones into the customer's own Jira. The graph layer is a disclosed open-source reuse; the audit, synthesis, and delivery layer is the built value. The model proposes, deterministic code decides, and a human approves before anything is written."

Did you even look at yourself while writing this? Do you have some fucking shame? Are you fucking serious? Do we actually mention stuff like Claude Code, Fable 5, and all that?

That was something the project document asked me to use because they asked me to use Fable 5. . That was in the FDE community so they mentioned asking us to use it. We don't mention all that on a fucking portfolio. Saying Fable 5 is orchestrator , Saying Claude Code built this is gonna kill our job search right away That is we should make it look like we have built it end-to-end. Yes we would Use AI to Build that everyone knows that but it shouldnt be addressed I would also learn while building it anyway. I would be able to defend that in an interview because I have that knowledge and that is what we want to do.

I told you to adjust the framing as per how a panelist of an FDE recruiter would approve it. What the fuck is "disclosed" open source reuse? What the fuck is "disclosed"? The word "disclosed" itself seems very defensive and very underconfident. It should look like it was a smart decision to reuse that and we don't say "reuse". Make use a good professional word, "integrated" or something like that.

I want you to do an Entire Audit of all the Data , in all the Project pages , Now that you have all the Data in Niranjana_Todo.md .

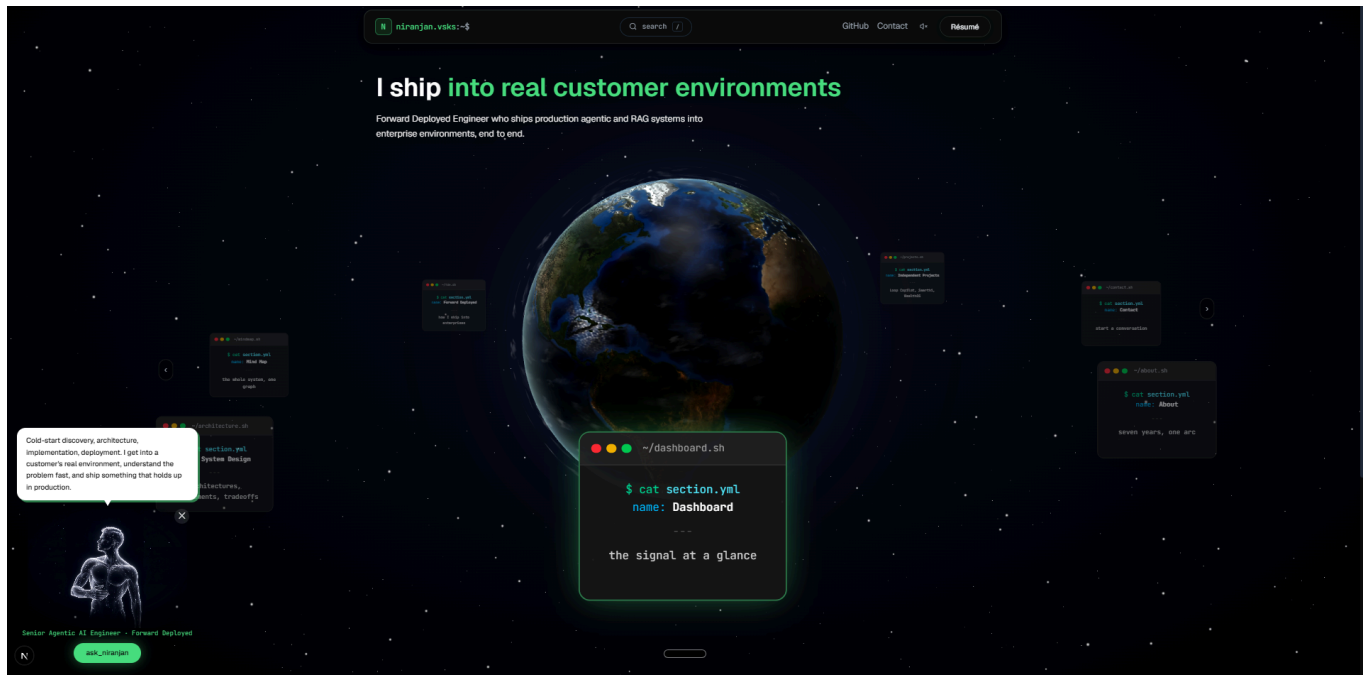

Audit that as if a Senior Panel of Recruitment for a FDE Engineer role is auditing that and parallelly Fix the review points of that audit points in the data in that Surgically. , Also invoke the /humanizer skill in the skills and use that skill to generate a Humanized version throughout , But Without compromising on ATS worthy Keywords , Quality ,and my FDE positioning.

Another Thing is

I already asked that this Starman avatar must first automatically expand and then after 6 seconds collapse back . But it is not opening up by itself on landing page load.

Also I asked you to increase the size slightly right , Increase it and make sure the Earth and

Cards exist in the background as they are , like even if a Card Intercepts the place where the avatar is standing in the page , it must revolve in the background without disturbing the Avatar . But little bit taller is fine dont make it too taller , just slightly bigger than what is there now thats it

Also in Independent Projects Card in landing page , Add the Agentic Autonomous Codebase Intelligence .

ALSO One thing I Noticed is that Every Section has a Heading about what it is Except the mindmap . So when the Mindmap loads there is no heading no guidance to user , while That is the most complicated and our best work. So What I want you to do is that Just like the same Styling of the Box we see as the Node Dscription , Same Styling , But instead Increase size a little and keep it persistent and at the left .

Title - "Portfolio Mind Map " or "Visual Knowledge Mind Map" (Add any better Title that hits if you can but Mind Map word needs to be there in the Title.)

Add that , and add a One liner Caption about it , Also Add a line , Zoom In for Best Experience and we have a How to use collapsible Icon If user wants to use .

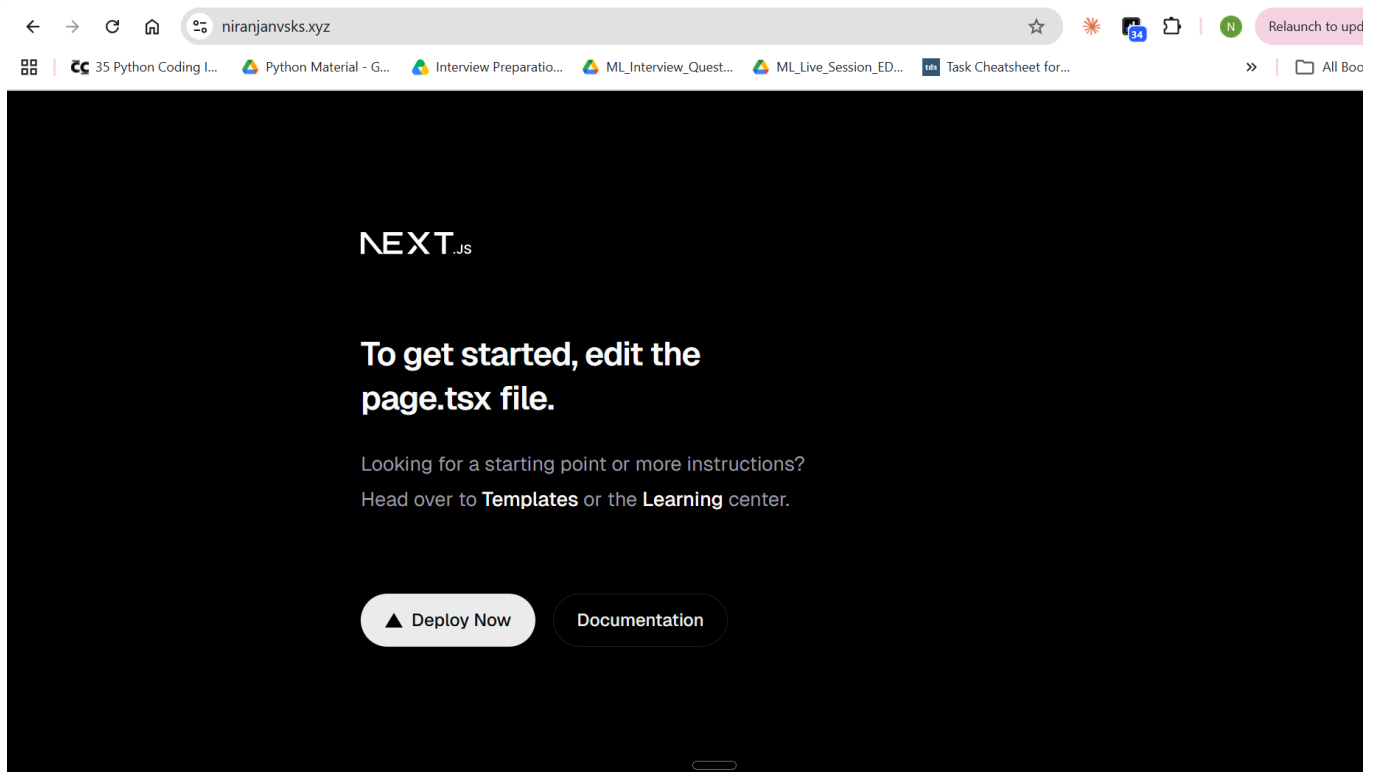

We mention Some User Manual (of MindMap) type stuff . Its just 5 Consolidated bullets. on How to use the Mindmap , We mention about how You can Click on the nodes and Redirect and also Check the parent and child nodes . and stuff , The writing should be very professional. Usage guide for other sections is not necessary as of now.

And Coming to the Deployment :

This is what I am getting when I hit niranjanvsk.xyz

:

I click on Deploy now i am getting this :

New Project

Importing from GitHub

 nlrnjan-vsks/Portfolio-nlr  main

Choose where you want to create the project and give it a name.

Vercel Team

 nlrnjan-vsks' projects  Hobby 

Project Name

portfolio-nlr

Application Preset

 Next.js 

Root Directory

./

Edit

Build and Output Settings

Build Command ⓘ

'npm run build' or 'next build'

Output Directory ⓘ

Next.js default

Install Command ⓘ

'yarn install', 'pnpm install', 'npm install', or 'bun instal

Environment Variables

Key

GROQ_API_KEY

Value

.....

Environments

 Production and Preview 

Import .env

or paste the .env contents [Learn more](#) 

+ Add More

Deploy

These are the 4 keys I have in My .env.local should I add all 4 ? as Vercel env variables by clicking on Add more ?

GROQ_API_KEY=

NEXT_PUBLIC_SUPABASE_URL=<https://dodfhncrzdisqhjgaxil.supabase.co>

NEXT_PUBLIC_SUPABASE_PUBLISHABLE_KEY=

SUPABASE_SERVICE_ROLE_KEY

Any More Configurations I should do ? Also I want to be integrating Posthog or something where I want analytics on how many people actually visited , what they clicked on . Surgically integrate that end to end .

I did add it and Didnt click Deploy Yet , But have it on the button so tell me can I go ahead.

And After this we can be Ready to Deploy Live , If you dont disappoint me.
