

New Portfolio Fixes

I AM AGAIN DISSATISFIED WITH WHAT YOU MADE AND I NEED REVAMPING .

In this the Flow Wave Green background is the only thing that you executed perfectly.

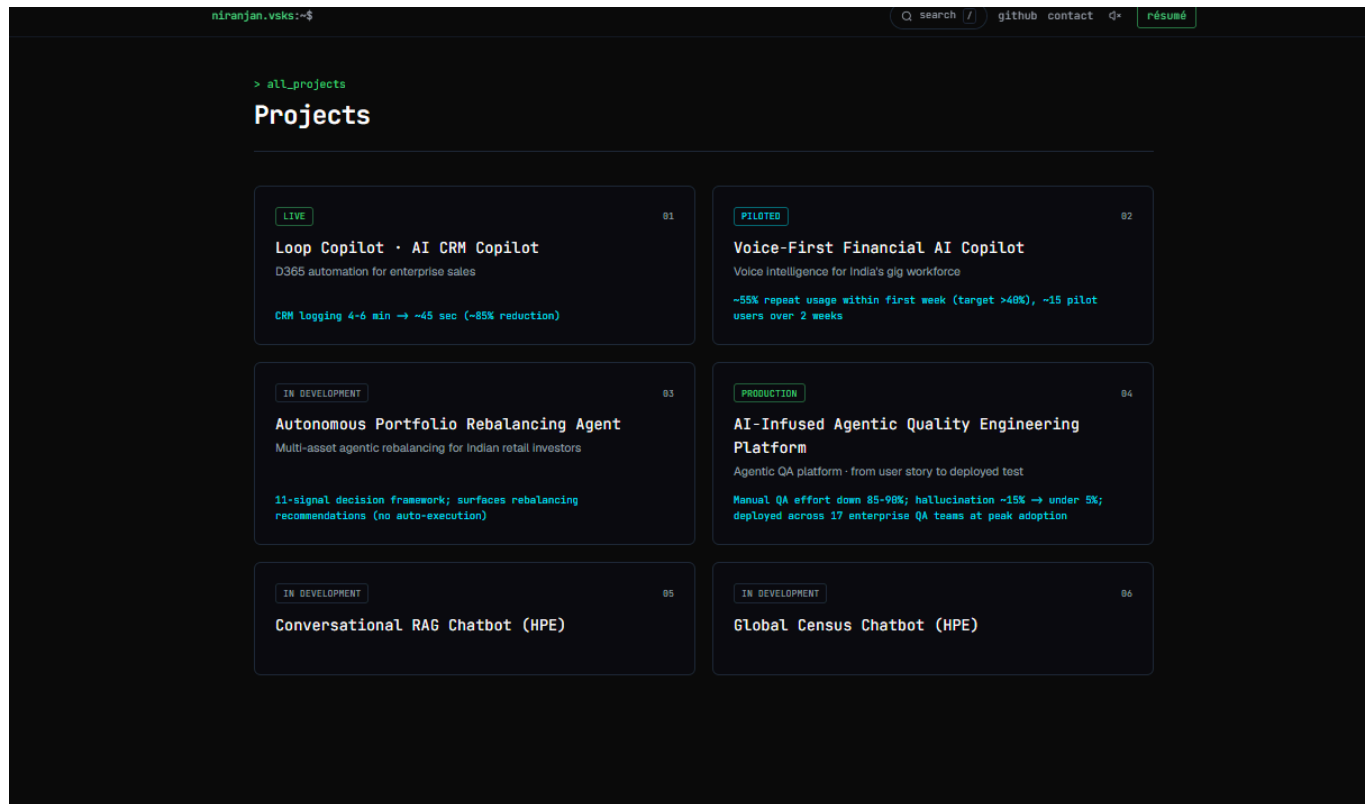

Remaining you fucked up .

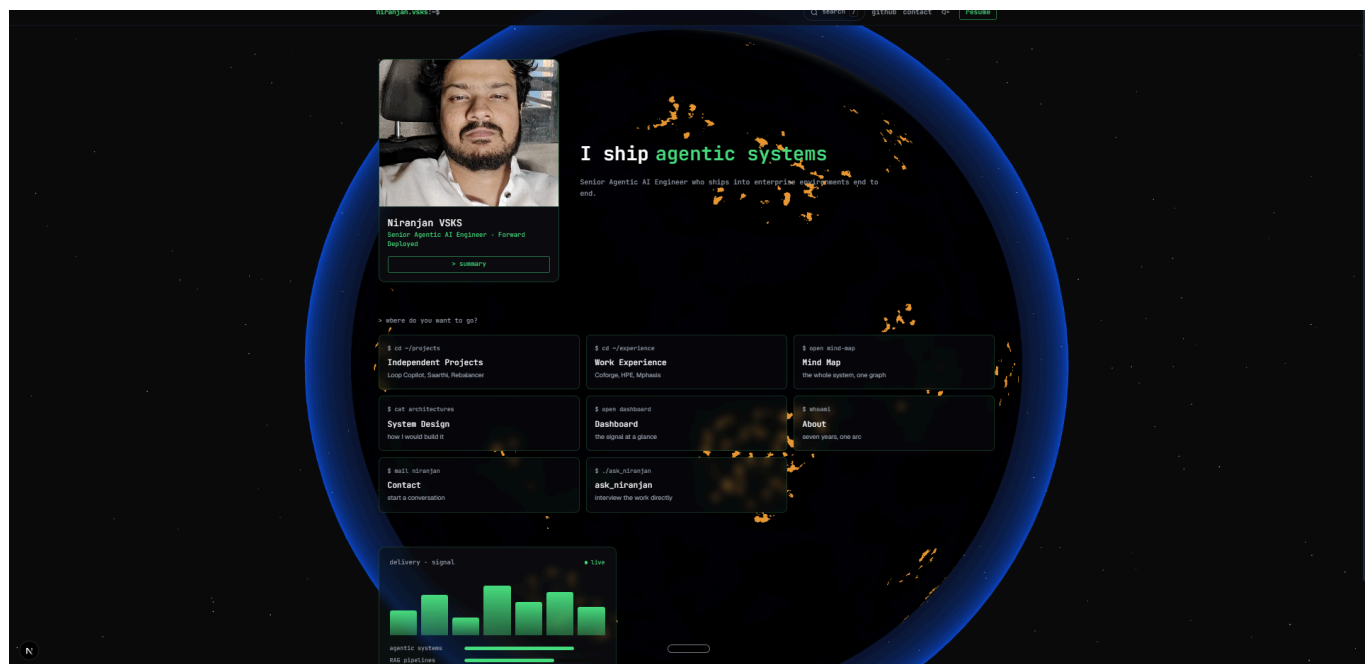

The Terminal Template was required in the Cards Not the Container Scroll template , the Container Scrolling Component must be AS IS . I ALREADY TOLD YOU DONT REDUCE THE COMPONENT TO A BLACK AND GREEN AGAIN . I didnt ask you to add the terminal stylingt here , And Even if you did , Its okay but the font and the size of it is really looking cheap and glaring on the eyes , Why the fuck is there another box hanging down with the info and if you wanted to use the terminal styling there in the box hanging with information written in it FIRST OF ALL let me tell you YOU MISERABLY FAILED AT IT . Moreover That IS NOT HOW I WANTED IT . I wanted these Cards where we list the Projects to be Terminal styled with a flip animation having a short caption like description and it flips on hover and on Click Redirects to its Dedicated project page

Lets Remove the Container Scroll Altogether , I feel it doesn't fit as well as it should .

In these Cards I wanted the Terminal Cards

And also These Cards in the Landing page also I wanted as Terminal Cards Initially - :

WHAT THE FUCK IS THIS , THIS LOOKS LIKE A CHEAP SHITTY COPY of a School Doodle Project , Nowhere close to a Premium Enterprise Grade Portfolio.

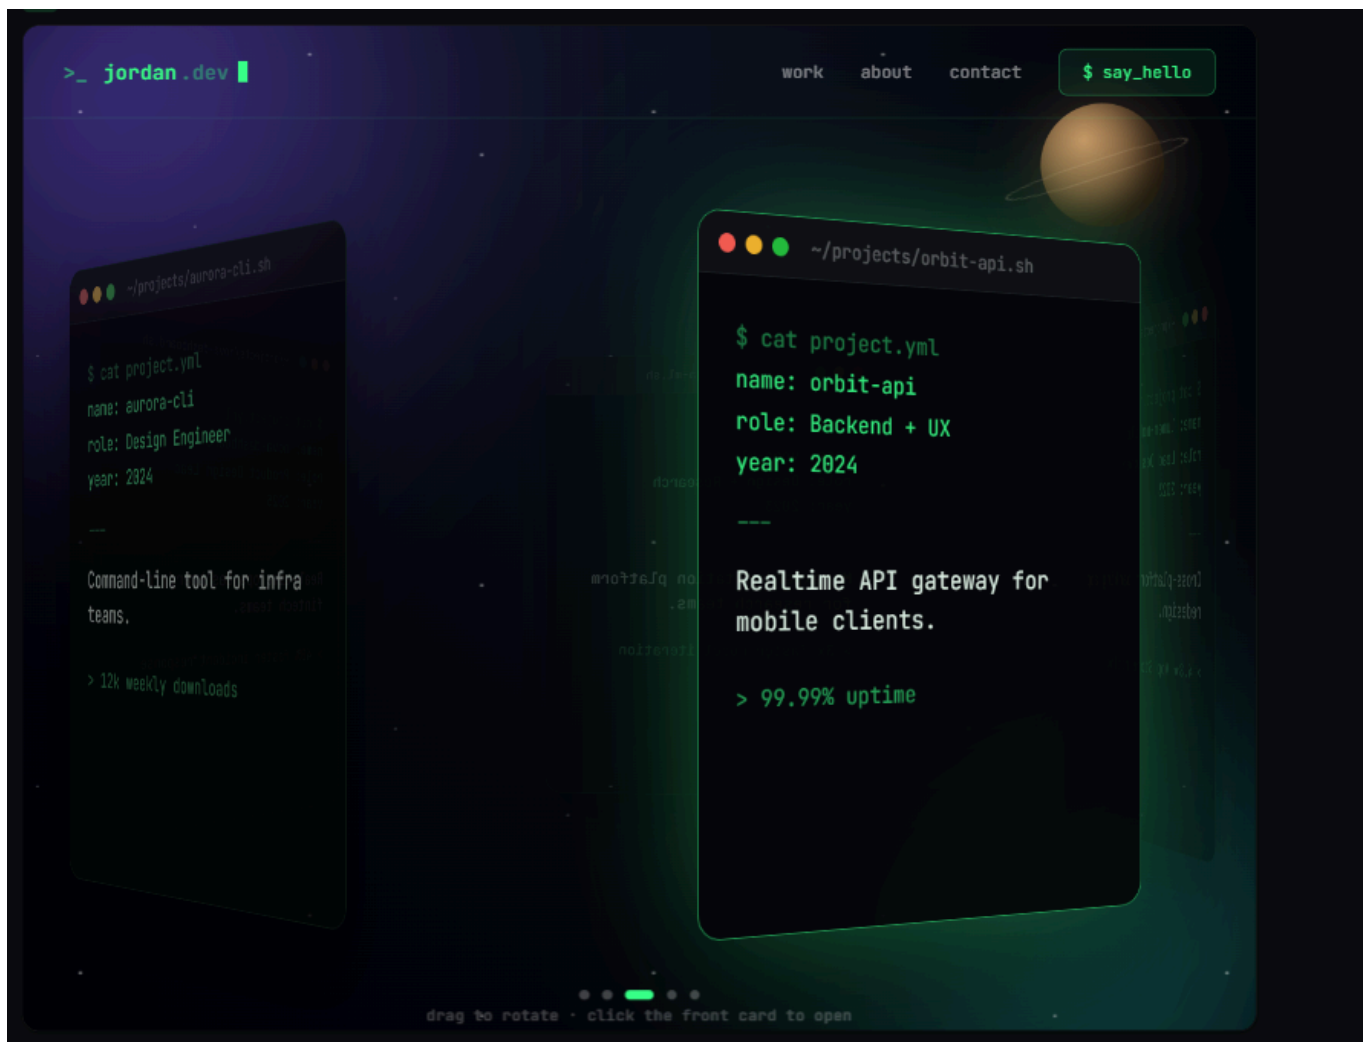

It is Okay if you violate the More than 1 3d WebGL rule , Fuck that . I want a Portfolio the way I want it . For the landing Page and MindMap lets Bypass that rule . That is something which creates a Make or Break First Impression , Show some Step Loader or some Creative Loading messages to keep the screen occupied while loading stuff in the background if needed , Ideally there shouldnt be latency , But if there is we will do this .

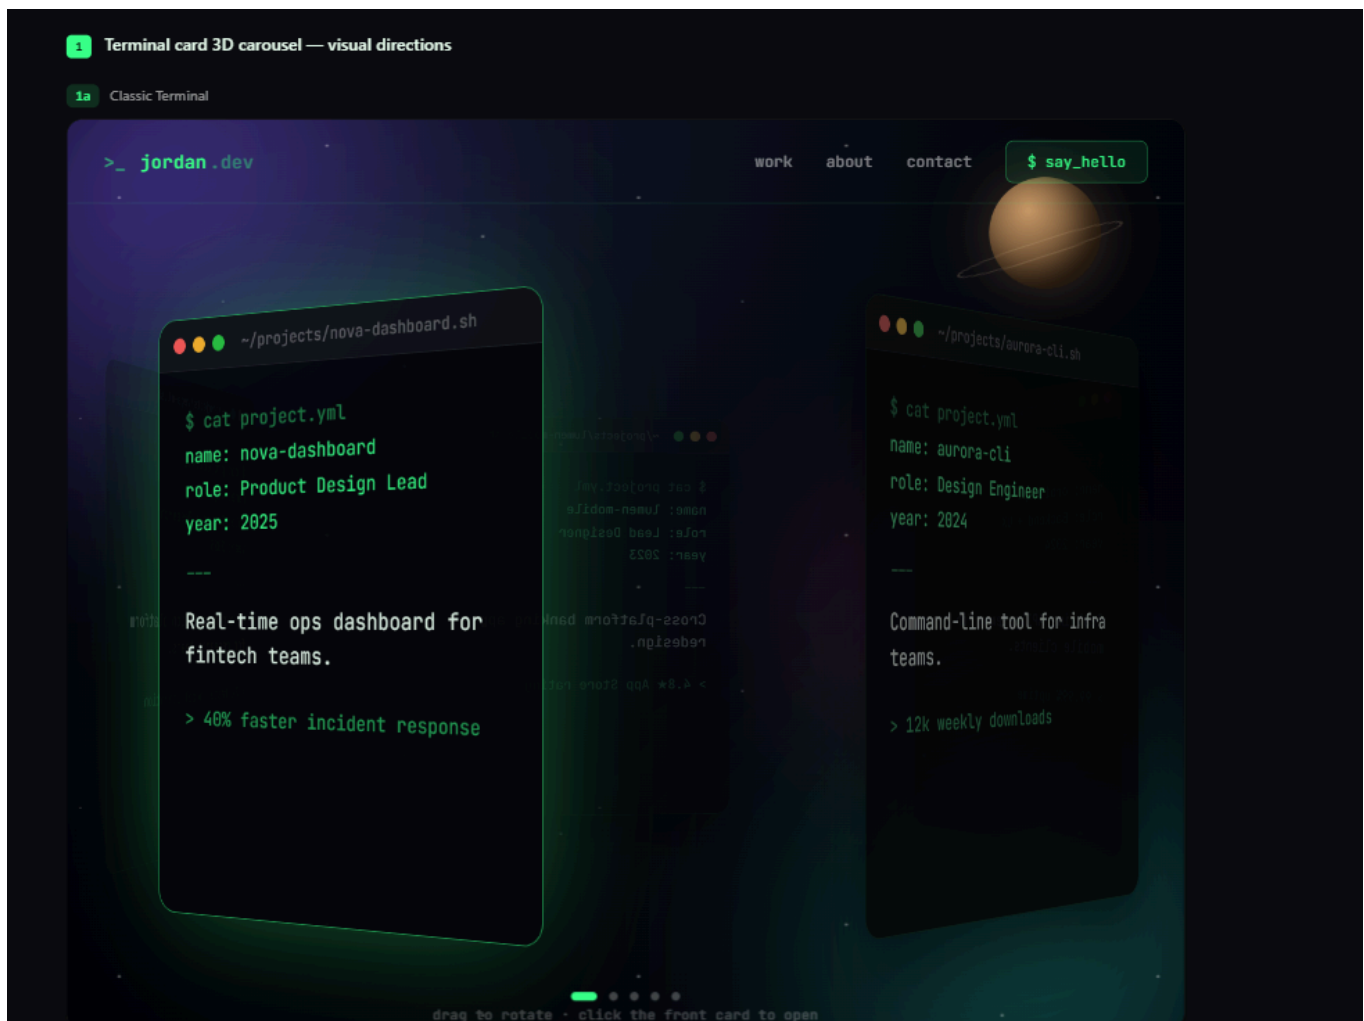

The 3d Card Effect , You have Reduced it to Ashes . By Reducing it to a Rectangular box that is VERY UGLY .

And just because the Ascend Template added bar graph , you dont need to force one there . Also the Globe was moving accordingly in a 3d manner with animations and effects in the Ascend template I gave you on Hover and Scroll , I clearly said MAINTAIN ALL THE EFFECTS , ALL THE COMPONENTS CODE AS IS AND ONLY AND ONLY MAKE MINOR SURGICAL CHANGES . Also why is there a Blue Circle around it . Also Globe doesn't Need to Occupy the entire screen .

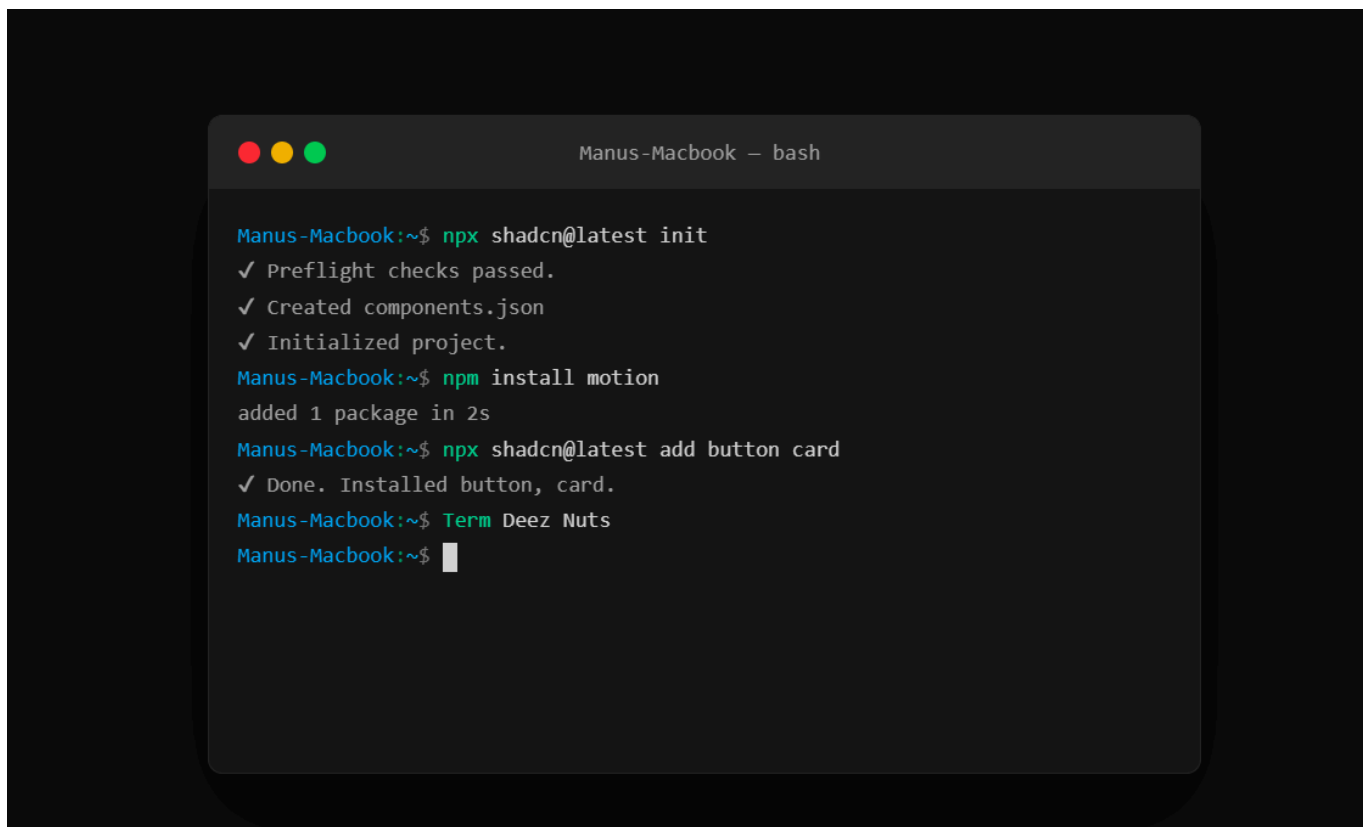

But Now I changed My Mind , I want 3d Rotating Terminal Styled Cards , Something on these lines .

The Globe is Going to be Rotating on its own axis in the centre , Fixed and the Terminal Styled Cards Will be Rotating around with TypeWriter effect in the Terminal Cards .

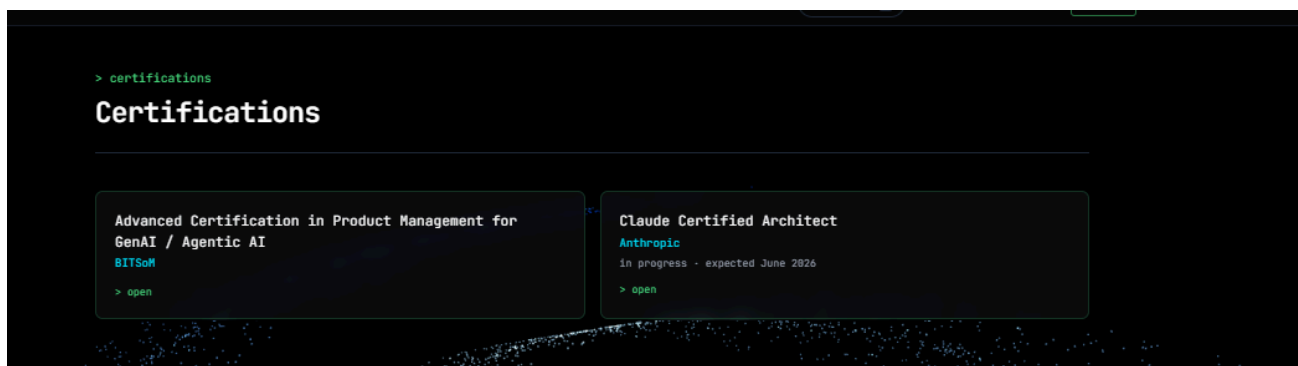

This is the Terminal styling Component of Acternity UI, You have the Actual Code as well its actual Master Prompt Ready to reuse in C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\terminal_card:

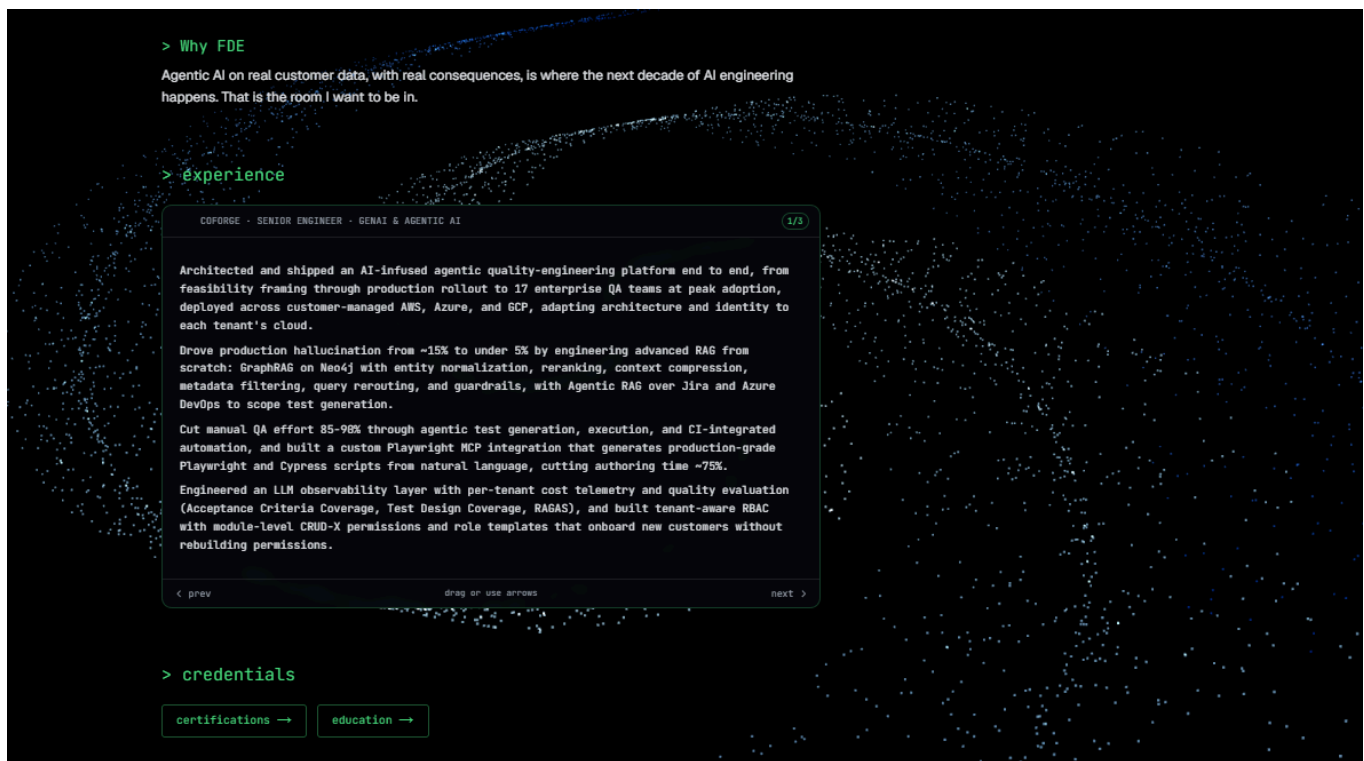

You can either use this or the One I generated from Claude Design , Or You can Generate it. Also the Top Nav , I didnt like it , the Font and Styling is SHIT.

And Moreover the 3d Card Component for the Photo and about is again reduced to a mere 2d card , while it is giving a Flipping effect , it is looking very weird . The Symmetry and Proportion of photo to text size is looking really weird . For the Landing Page I dont mind if you Violate the 1 Heavy 3D element rule , Its Okay Render the 3d Card as is . ``

Also the Certifications sections These Cards should also be in terminal cardS

And even the Expirence section of the About page , Here What I want is again an Infinite Moving Card effect with Terminal Style Cards And Each card on hover will stop the moving (The effect is already defined that way so u dont need to change much there you can reuse that property) and on click , of that Experience card , it should redirect to That Page :

Also I noticed a Critical Flaw here . The about section and Experience section are fucking same !!! Just tagged with different / params . The Experience deserves a Seperate Page of itself . And remember this My Resume and LinkedIn are places where I had to be restrictive of openly being a Forward Deployed Engineer Because I didn't officially have that title . But here I have little more freedom . So in the Experience section I deserve a Forward Deployed Engineering section and Multiple indications and Proofs in the form of Tags , Bullets , And projects , Things I have Worked with customers , things where I have worked on Architecture level , for Cost Optimization , Cloud Optimization , LLM token optimization , Infrastructure Optimization , Low Level Code optimization , Customer Negotiations , Stakeholder Interactions , etc. , and then When We mention about them , wherever there is mention about the Project , That Name should be a Button with name of the project , Like How Wikipedia does , In the sentences the words are hyperlinks and if you click on that word it redirects to its dedicated wiki page . In fact in the Descriptions , Wherever there is a mention of keywords that deserve a Click , in the Description it should be shown as a Clickable hyperlink (Make sure it is highlighted in a different color that makes user understand that its a hyperlink and with a hover action that shows a Caption text like a dialog box on hover with a one liner about it , something like Click here to Explore this project in Detail,)

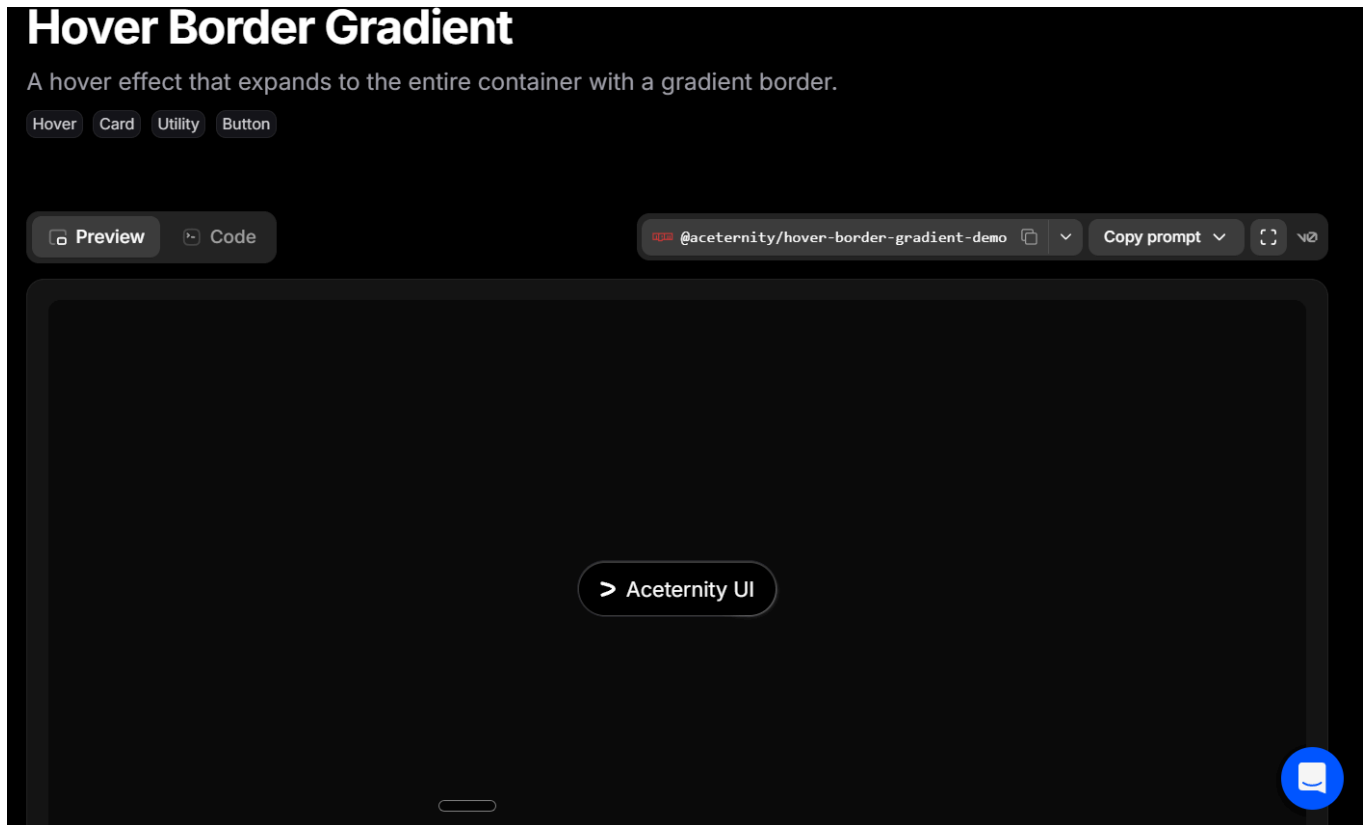

Moreover another thing is These buttons are super shitty , Change the Style of the Buttons , They are very small , very basic , bland and SUPER UGLY and is it screaming cheap. Nowhere close to premium.

The FONT is SUPER SHITTY and UGLY for all the Text especially in the Landing PAGE . Remove the usage of this font styling altogether it looks Really Really third class .

Also All these tags on clicking should redirect to the mind map and zoom on that node.

Instead we can use this styling for Buttons :

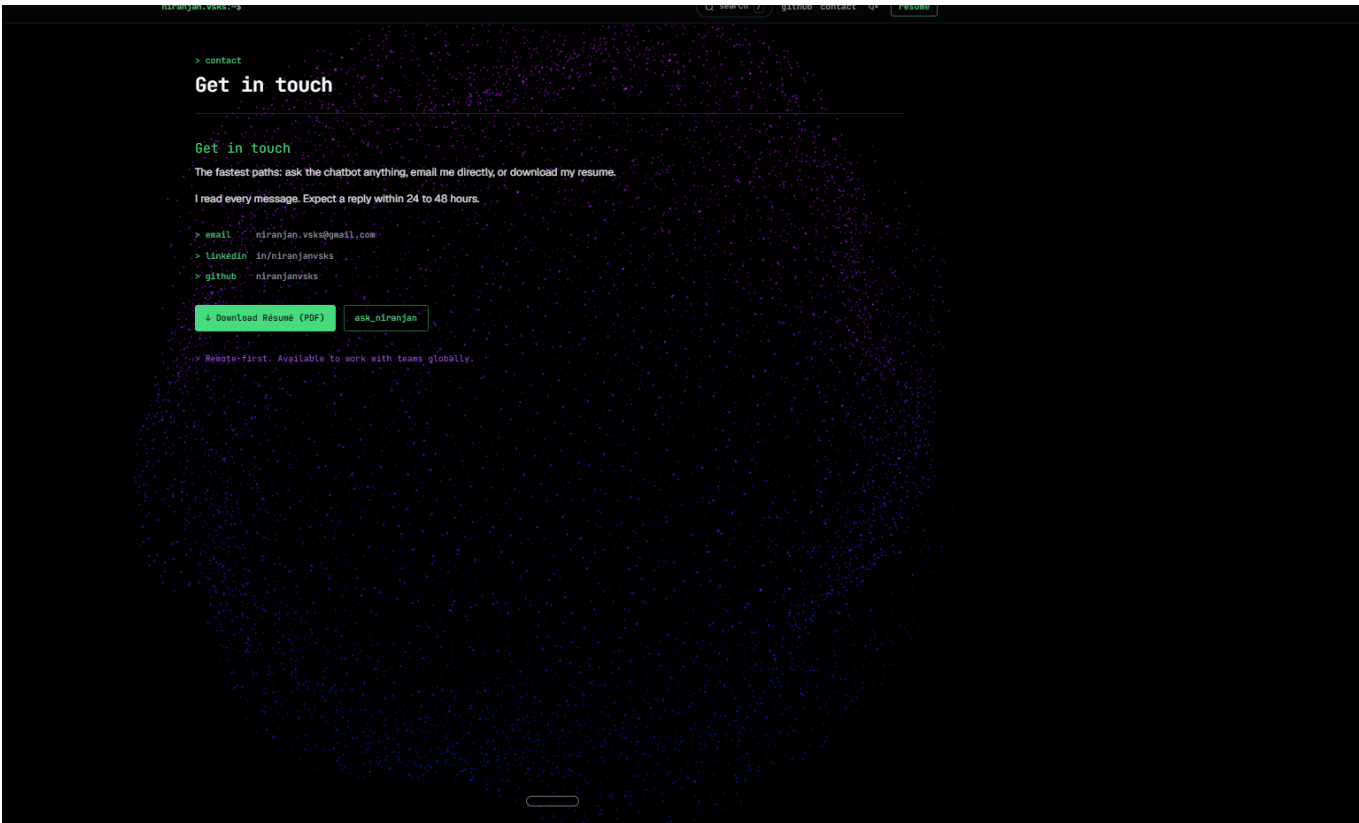

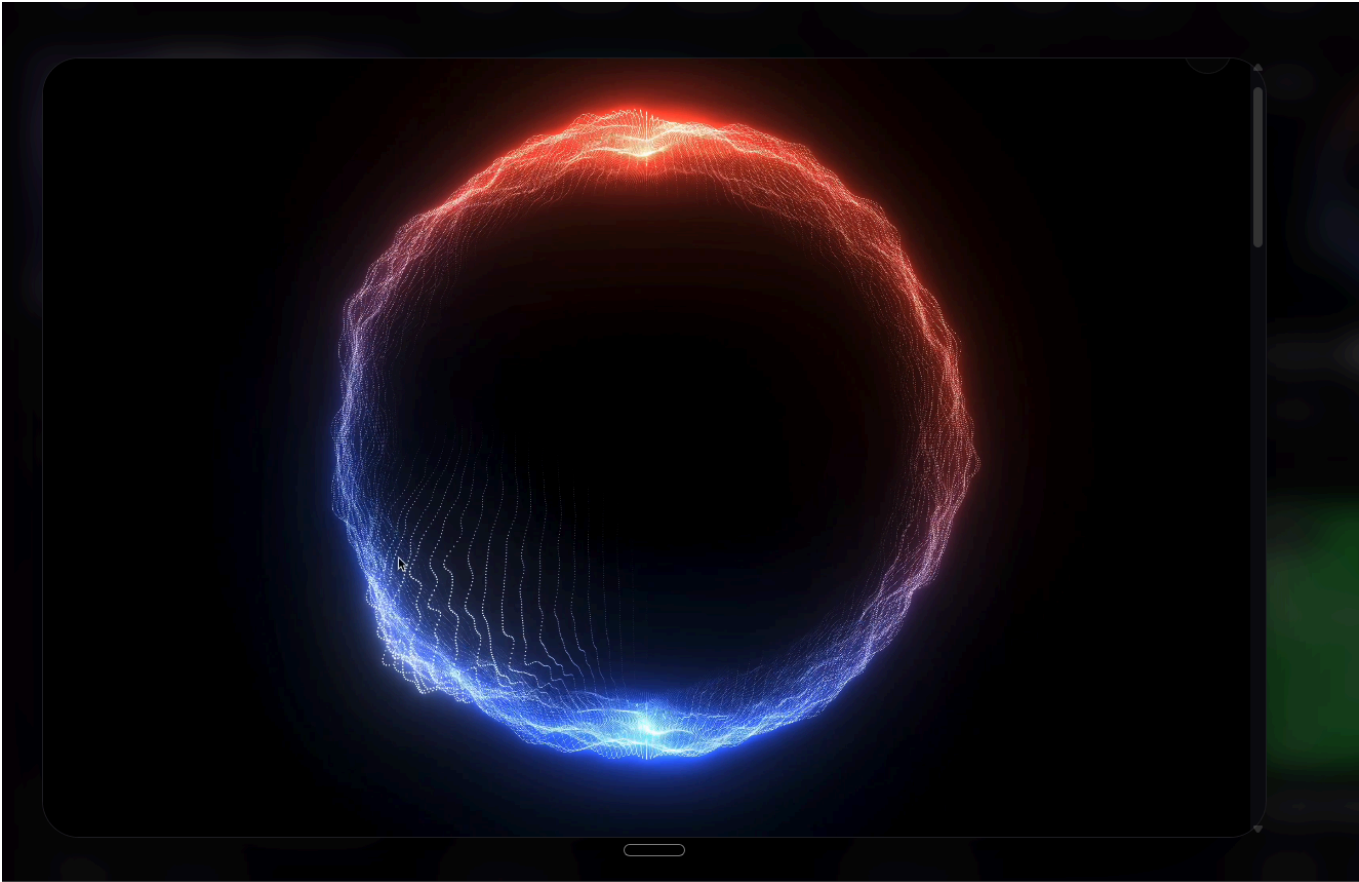

Make an effect that it Glows and the borders light up when hovered on and Text also glows up and it looks clean and premium and the Buttons must have a 3d look to it and while clicking it must give that pressing effect where they are going inside a little (you understand what I mean?)

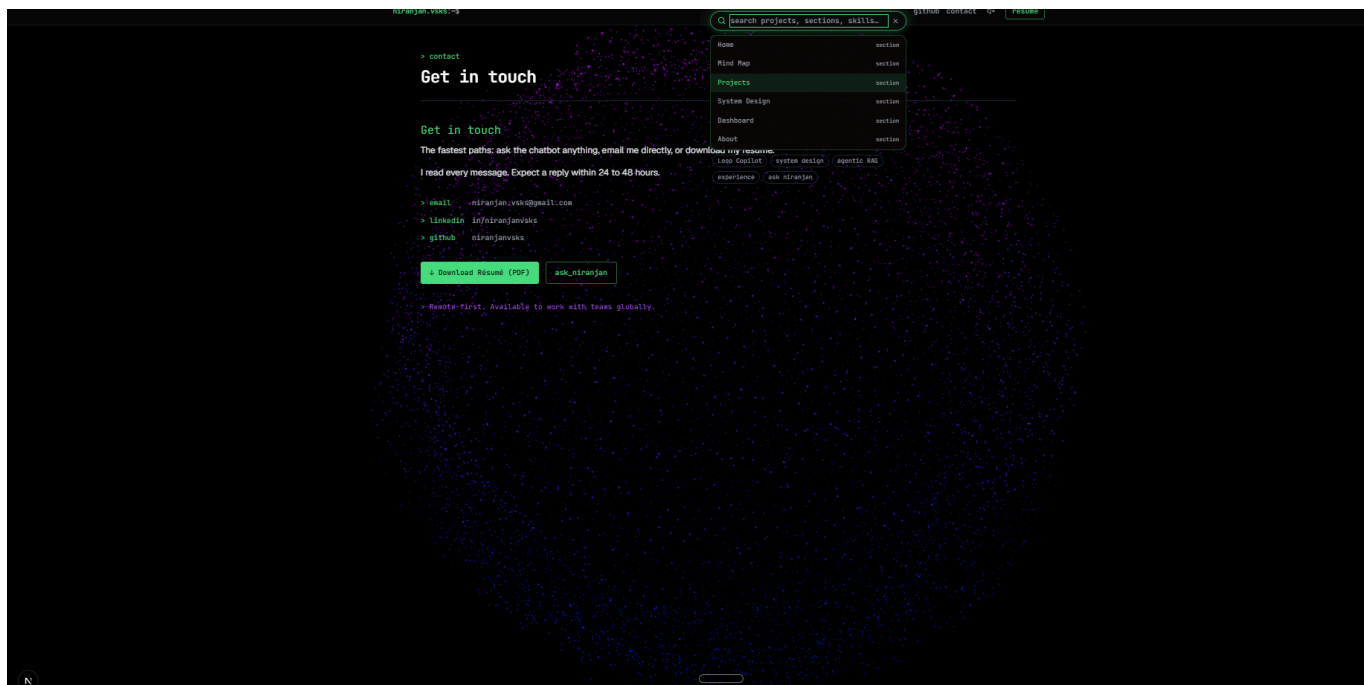

The Contact page has been FUCKED as well. The Particle Sphere animations is again reduced , VERY DEPIXELLATED than the code is . Also Contact page Really Bland .

Instead of Particle Sphere in the Contact page , you can add Solaris , The Actual Source code of this you can reuse from C:\Users\NIRANJAN

VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\solaris , Understand the code completely and then Integrate it seamlessly in the background , without

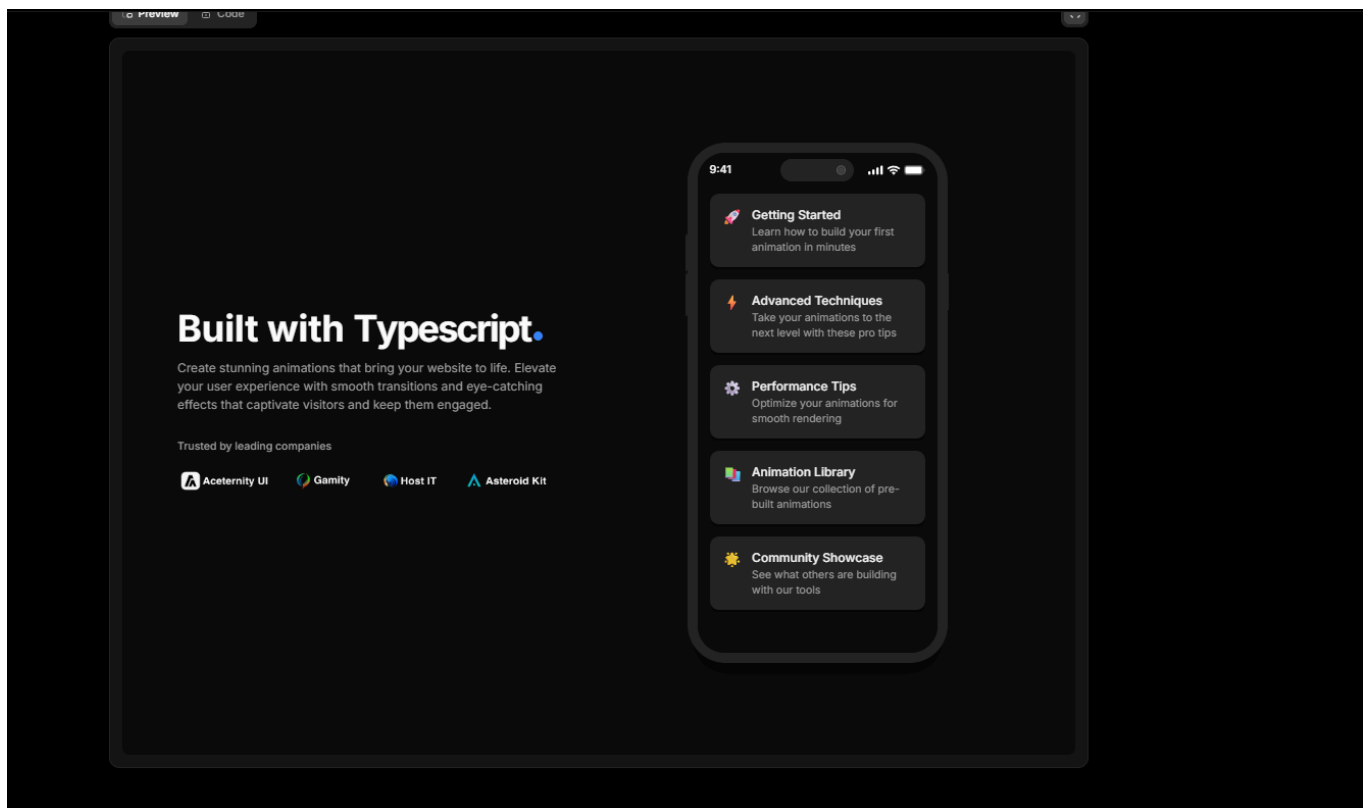

messing it up :

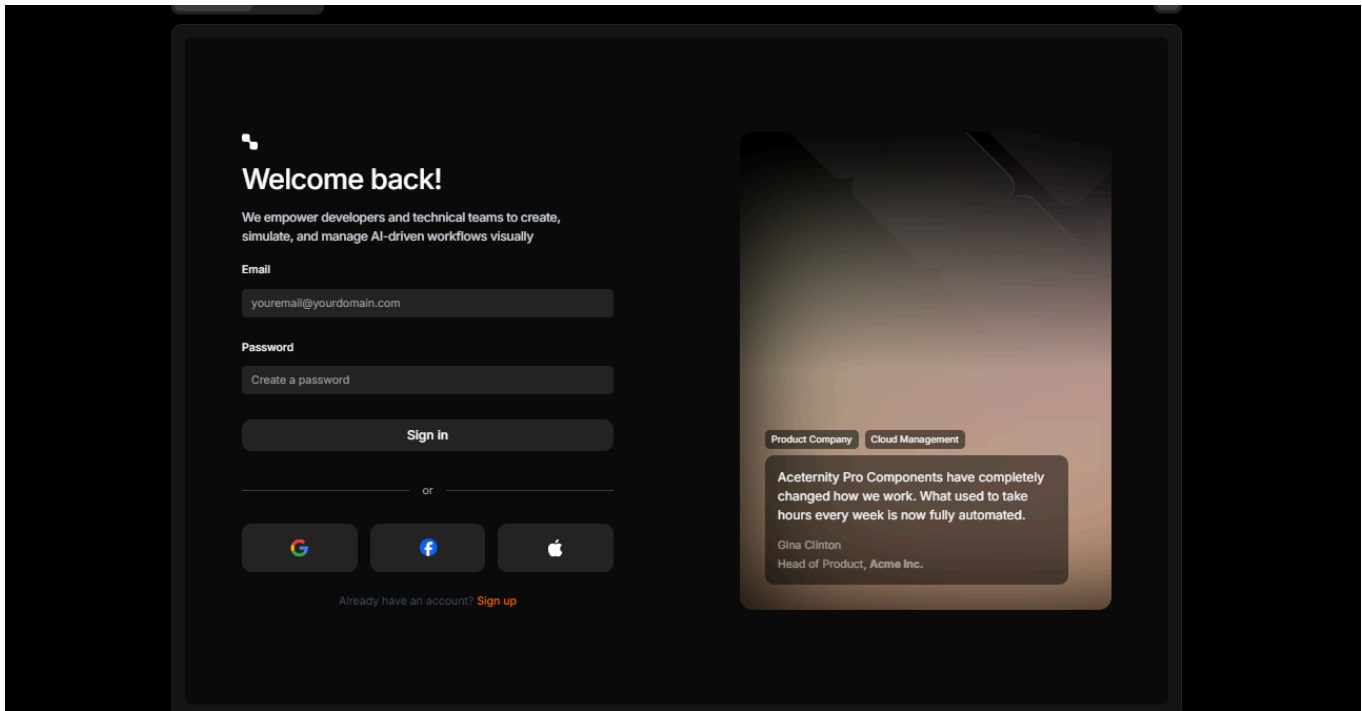

Search Bar is small and should have been in center and also should have been a smart one .
 Let the Text on Buttons be Clearly Visible , Like in an effort to keep terminal font , the size is decreased and if recruiter looking at it is having to struggle to find the elements we are doing a mistake right there . use the styling used in these Acternity components if you want , they kinda look clean only

This Font Styling -

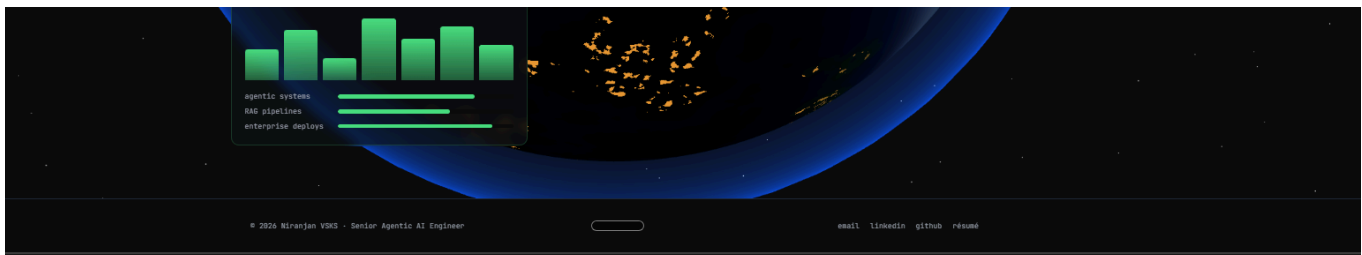

Or MAYBE THIS font styling :

Keep the Encrypted Text Effect but change the font size and styling so that it is cleanly visible.

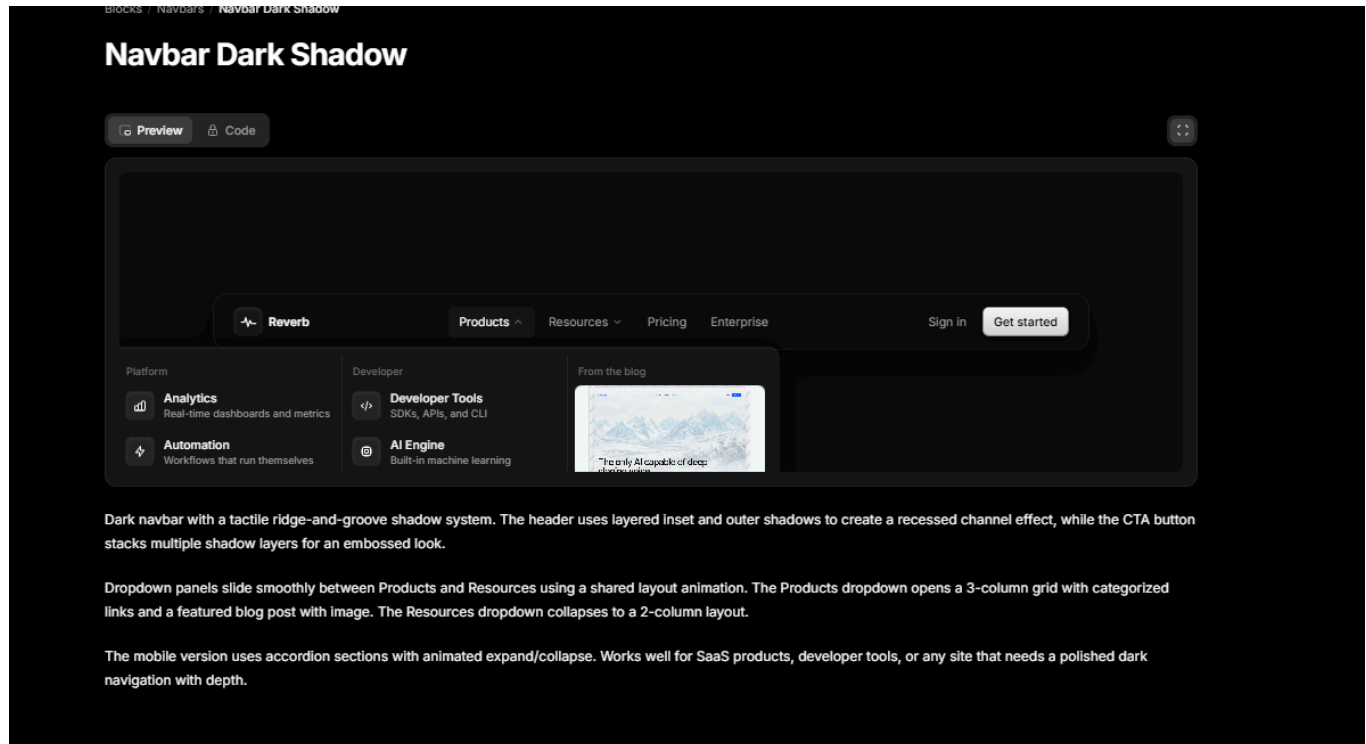

And Look at the footers , Is that a Nav Bar , Are You fucking Serious . It is not even Visible to anyone .

Whatever you do , Make it look Clean and Premium , Not a College project doodle .

The Website should look , Clean and Premium and Show that the guy who built this is someone of a Production grade , enterprise standard and not some basic Noob AI prompter.

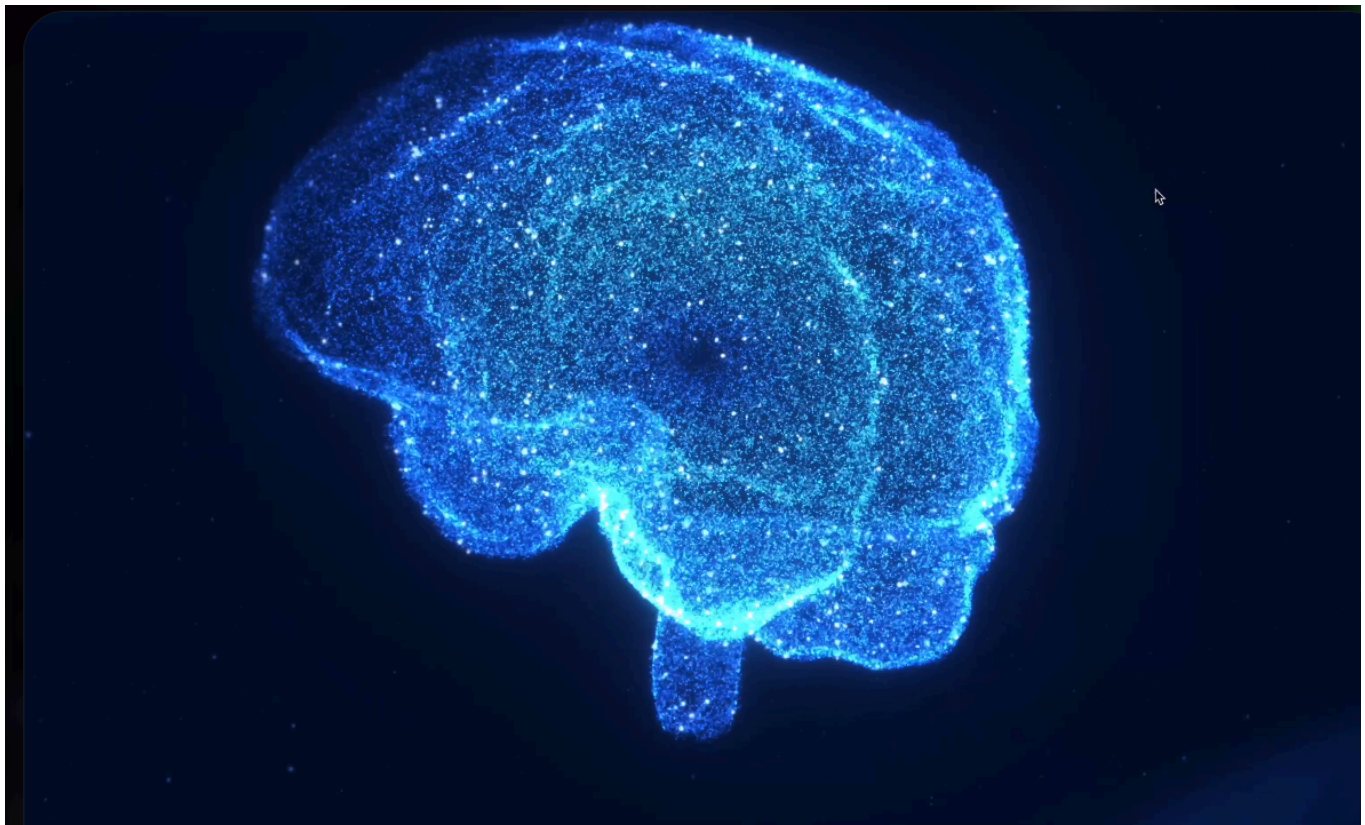

See this This is a Navbar With Preview , We can do something on these lines .

NOW COMING TO THE MINDMAP SECTION :

WHAT HAVE YOU REDUCED THE BRAIN ANIMATION INTO , THIS IS THE CHEAPEST WORK YOU HAVE DONE .

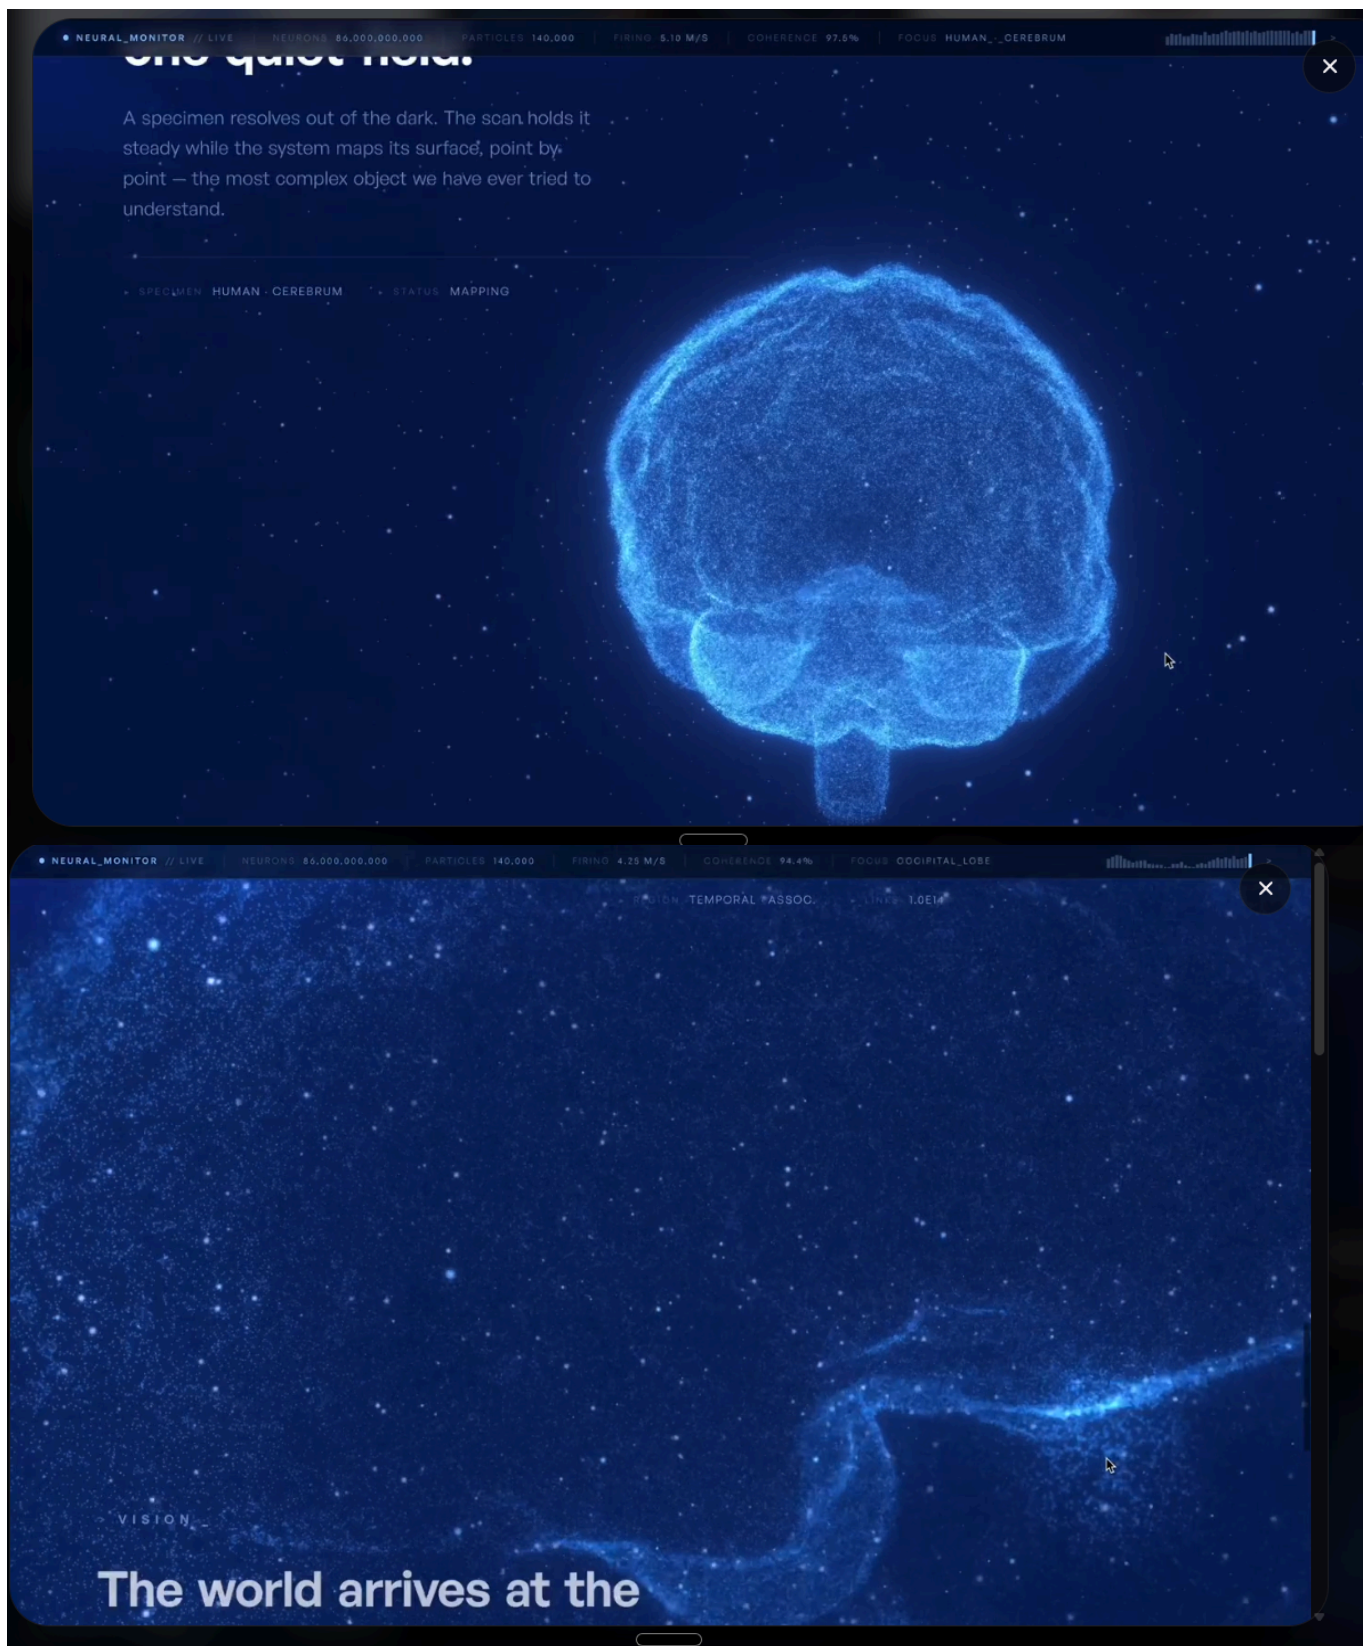

This was how the brain was expected to look

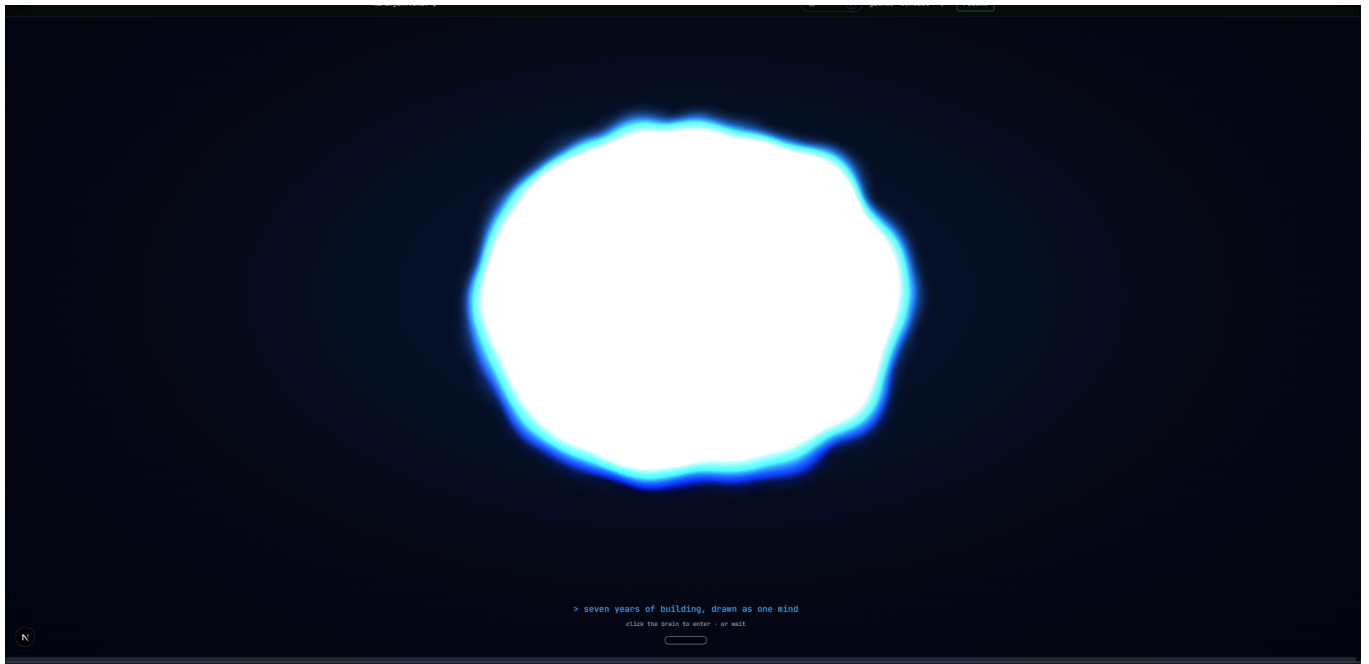

![[Pasted image 20260702014602.png]

LOOK AT THE DETAILING IN That3d scene brain component , How the neurons are shining ,

And in the landing Page , first the brain is at the center , little bit tilted at the right and then glossy shine and slowly moves and zooms in and the neurons all dissolving , as if it is letting you deep inside the brain and then the whole Background turns into Blue with neuron particles scattered around making it look like stars in sky . and then it transitions into a dissolve effect and mindmap loads in black background with smooth transition , I don't want the neurons smoothly but even if the Mindmap loads smoothly also I am okay. :

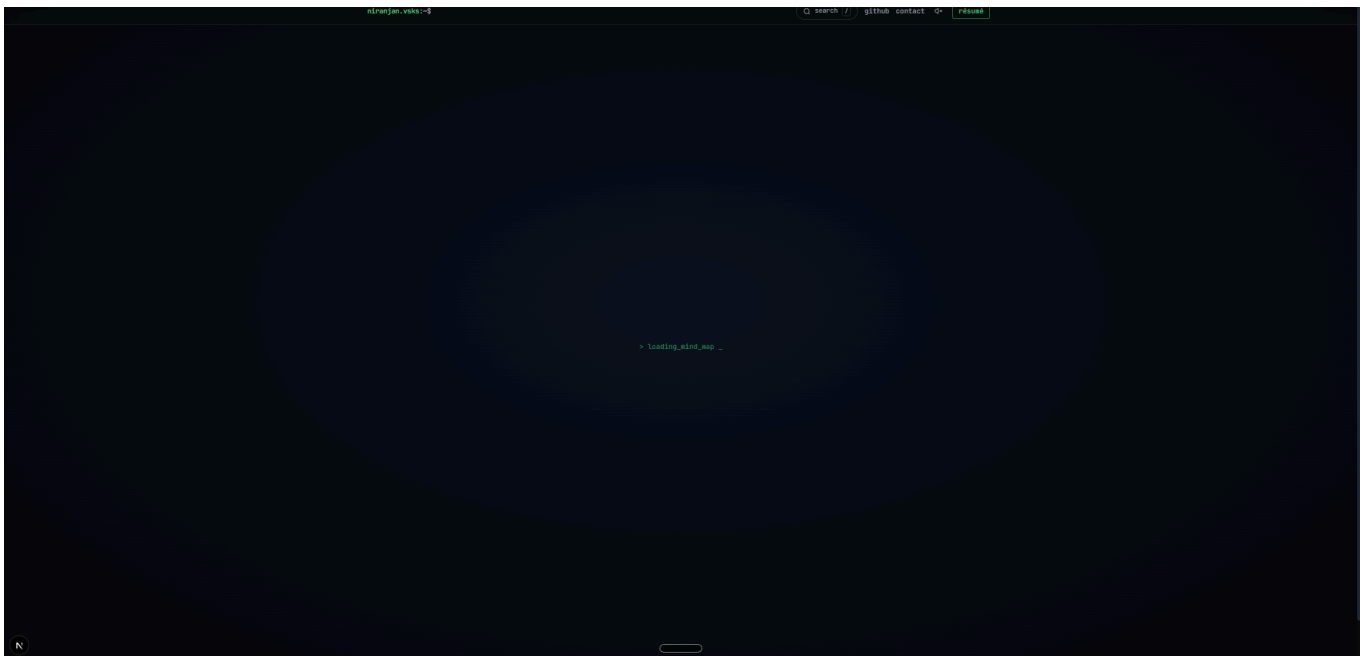

But look what the fuck you made , it looks like some white color table lamp that opened a portal

The transition is also very cheap looking ,

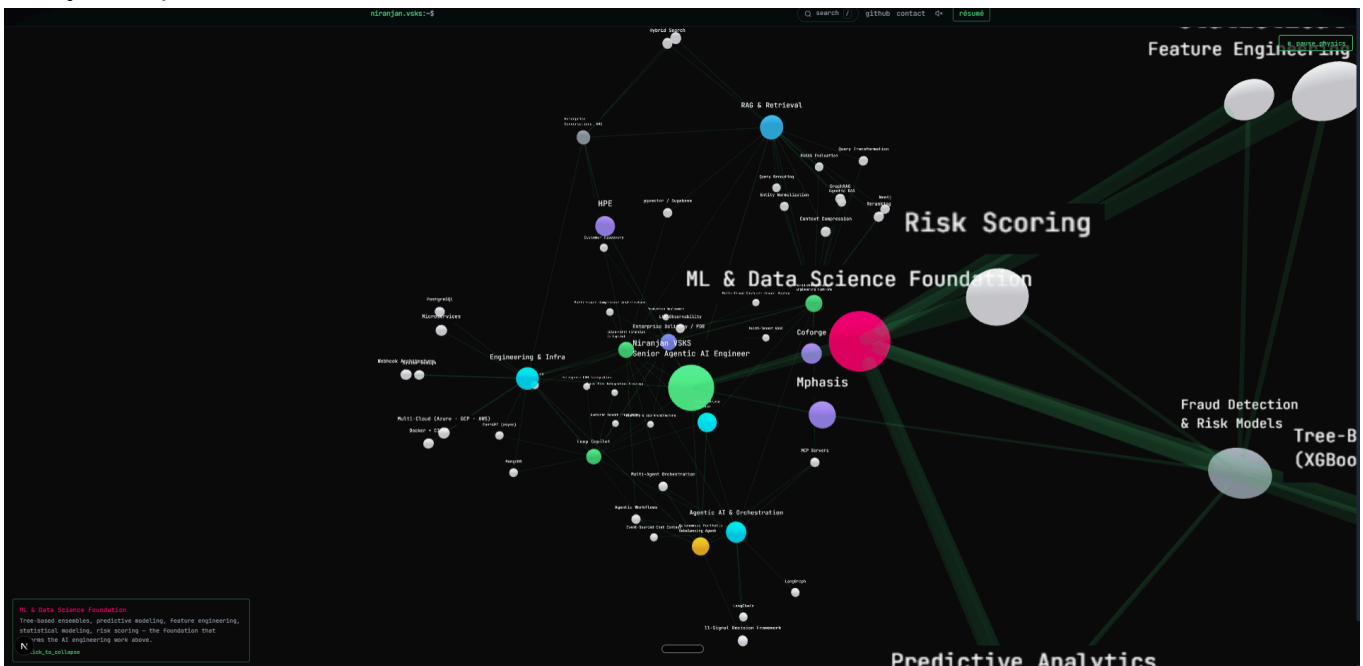

And it is back to that same shit ass Nodes and edges with negligible interactiveness to it , no 3d look , cheap ass third copy of obsidian , No Hover actions , like zoom or Nodes moving effect , No Brain Background that I told you , even if not this atleast add the Brain At the left and give some outer space effect in the background (premium looking) in the worst case .

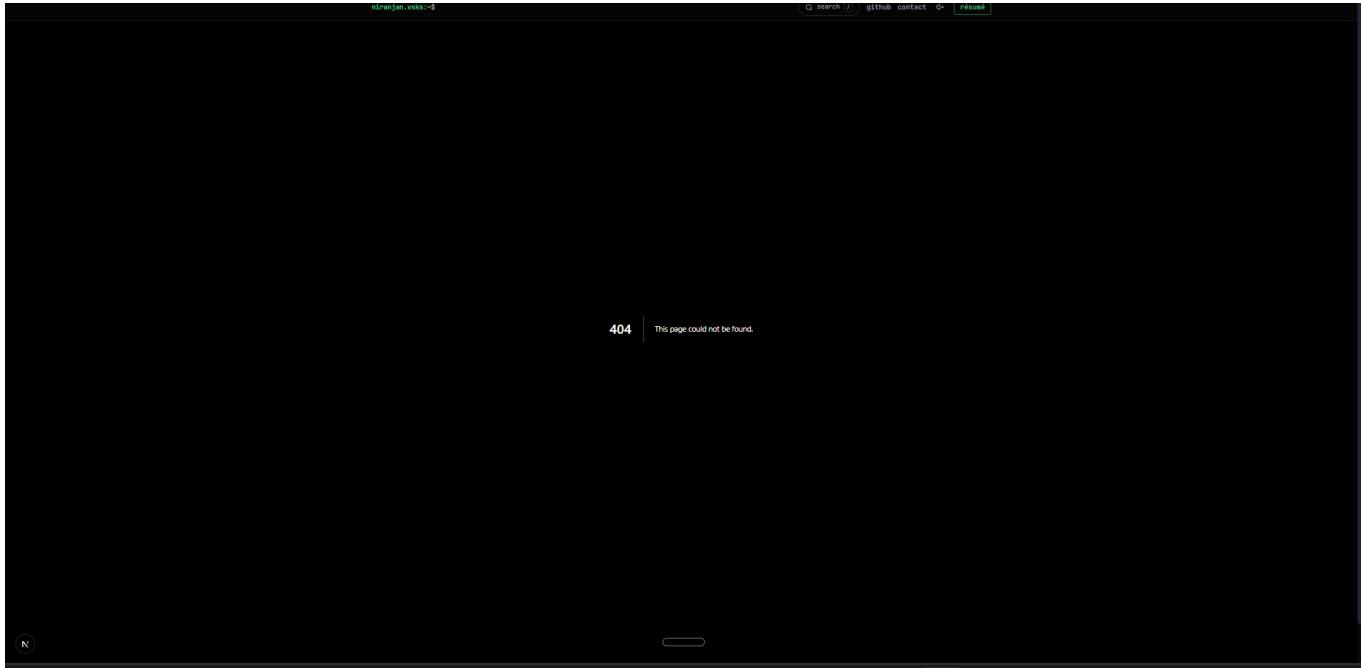

And the Connections that if we click somewhere it is properly leading to it is something we wanted .

For example , The Highlight relevant and connecting nodes and edges on Hover is a good thing that you implemented :

But If You see the Description card box of the node is somewhere lost in the bottom , It would be better if it is a Translucent Card which Appears a little in the left side in the middle , center left maybe and then shows it , then it would be good , also on click behavior of a Non Root Node (A node that has subnodes under it) , should be that it automatically zooms and focuses

on Its next sub node ,That is , if that Node doesnt have a DEDICATED PAGE to it . If that Node Has a Dedicated Page to it , then on click behavior should redirect there irrespective of it is a root node or not .

Right now for Nodes you havent defined On Click Behavior yet , We are getting a 404 Error and We gotta fix that . There must be no 404 , 500 , 400 , 401 any errors at all ! Everything must be seamlessly integrating and working like Clockwork

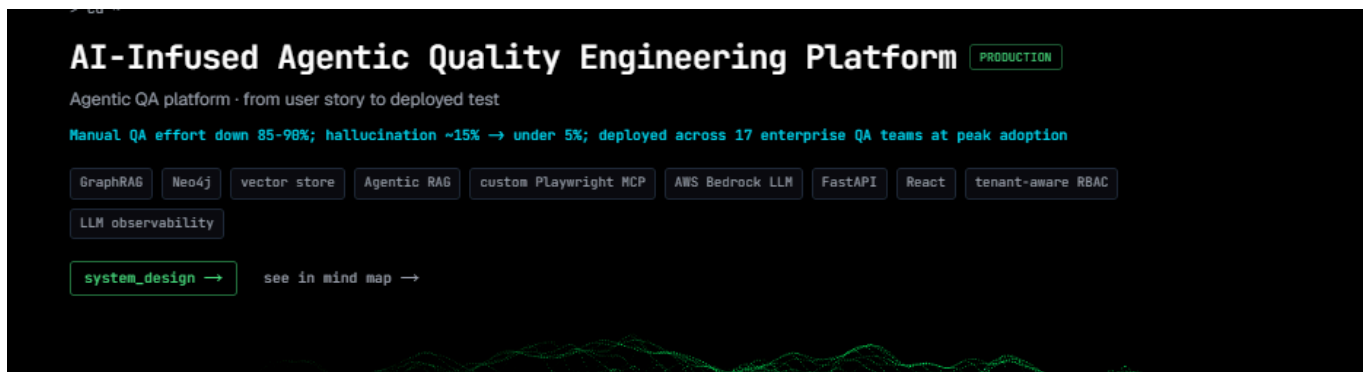

as I said, First the Main Nodes which have sub nodes , On Click Behavior will highlight and zoom on to Its sub node and now subnode will show up like the main one in focus on the screen (Note that the Description box for all of them should appear irrespective , that is a Non Negotiable and should apply to all NODES)

And If that Node has its Dedicated Page , It will Redirect to that page and Wherever redirection is possible we must make it redirect , For Example , each project has its page , Each certification or Education Milestone has its page , But Skills don't have its page but It must take to the About section where the Skills are mentioned (Also I wanted Infinite Moving cards for the Skills I fucking don't see that anywhere , The Code js file of it we have in :

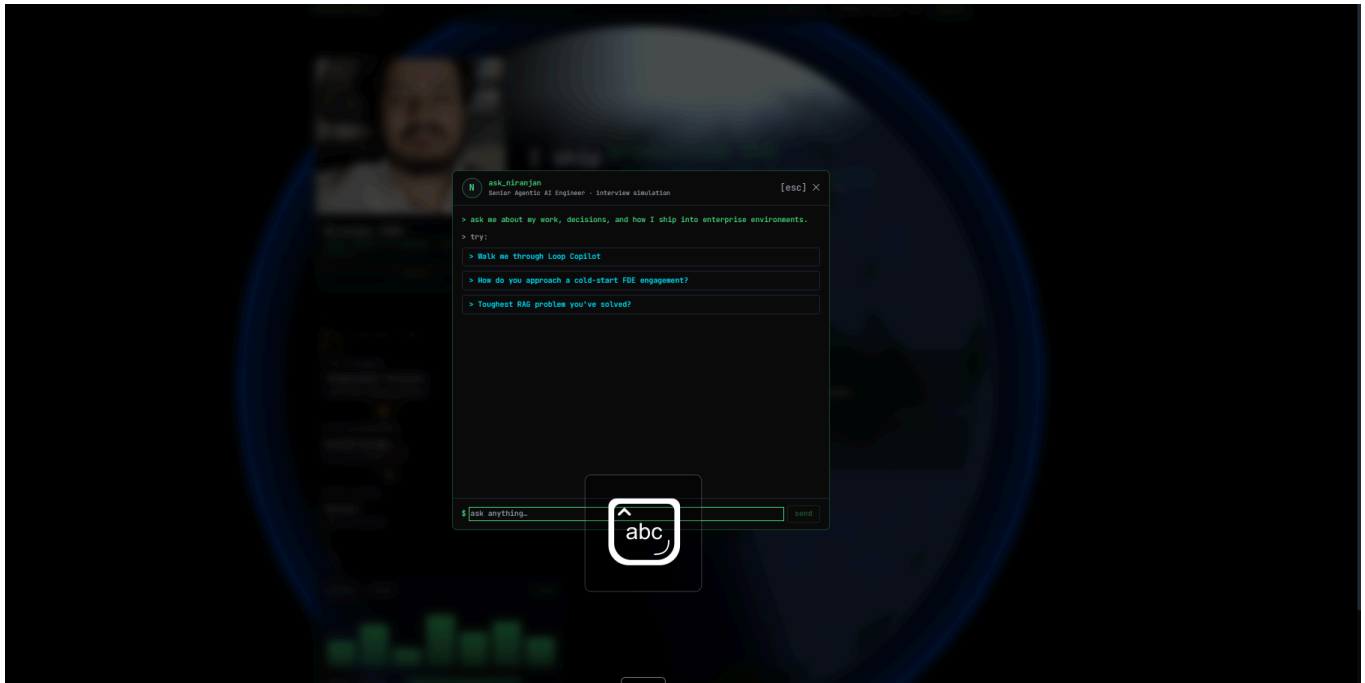

C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\infinite_moving_cards)

And if we click on any skill , then it takes us to the skills section , if we click on Project , it takes to that Projects page , And As far as possible Lets try it in such a way that almost every Node is Clickable and Redirects . And the Mindmap must be Dynamic , as new Data keeps being ingested and updated , Nodes and edges must be updated in the Knowledge Graph.

Also Why are the tags in the Pages not clickable ? Didnt we discuss it must redirect to the Mindmap section and zoom and focus to that node and highlight its edges .

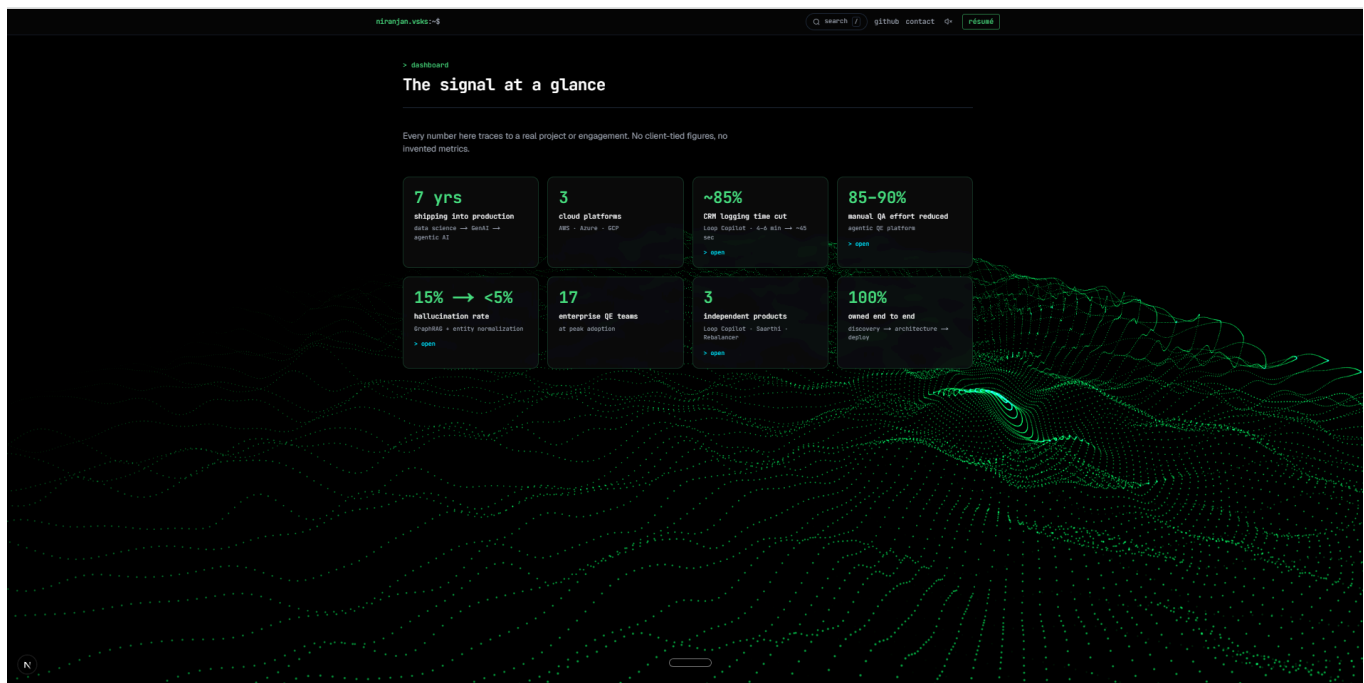

CHATBOT :

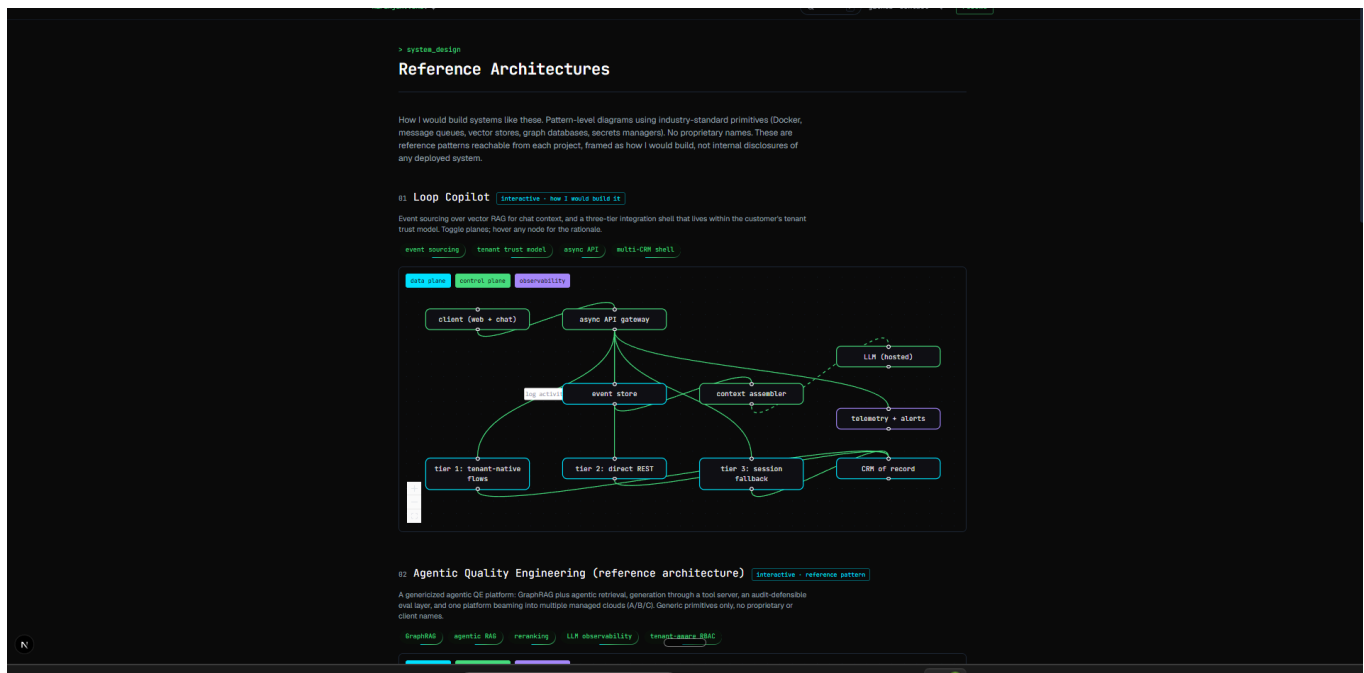

Coming to the Chatbot , IT IS THE WEIRDEST LOOKING OUT OT ALL . Make it look Good , Aesthetic , Symmetrical and Premium in UI style and elements ad also Make it stand out . Also in the 3D Card at the Landing Page , the Ask_Niranjan chatbot's Button must be there so from the 3d card itself user can click on chatbot if they want to.

To be Honest the Flow Wave background is the Only thing that you executed properly , Keep it as Constant Background for any new page from now on , Except for Contact and About page .

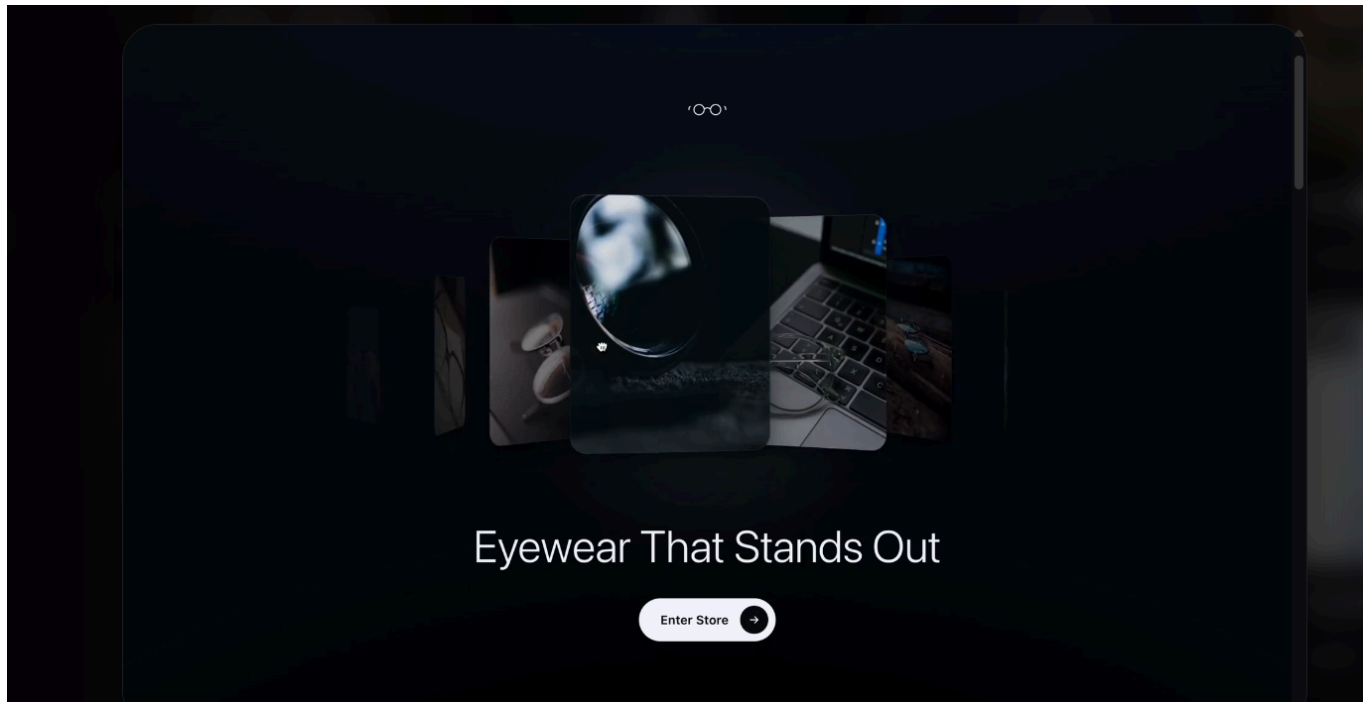

Including System Design Page Also , I want the Flow Wave Back Ground
Infact Apart from the About and Contact page , For Every Dedicated page , Lets consistently keep Flow Wave as the Default Background as this is one thing you are integrating properly so lets stick to that :

Also the Dashboard As You can see doesnt look Interactive and Is Very Bland and we are wasting the space on the bottom of these number cards , as well , lets add more interactive elements . if we can and the Cards shown here must be clickable as well .

And for the Project pages I want us to use this Template :

Slider Spectra is the name of this effect , where this is like a Cards Shuffling Sliding effect. me and I REPEAT SURGICALLY do this , DONT MAKE THE SAME MISTAKE OF Reducing it to a Basic Bland Black and Green thing . Keep this as is , But the changes I need here are that all the cards of Screenshots are the same here , Instead the one that is selected , that is in focus , the centre card must be slightly considerably bigger in size than the others and should give a zooming effect in the center and others would be blurred in the Background slightly to give the out of focus effect .

The Actual Official master Prompt used here in :

C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\slider_spectra\slider_spectra.md

Also the Caption is constant here in this reusable template prompt , But in our site ,It would change on each screenshot change and the description should be shown under it . with multiple sections , each project having its Overview and Description which is home page of that Project .

And then there will be other sections (with dedicated redirected pages but sub sections /tabs of that page)

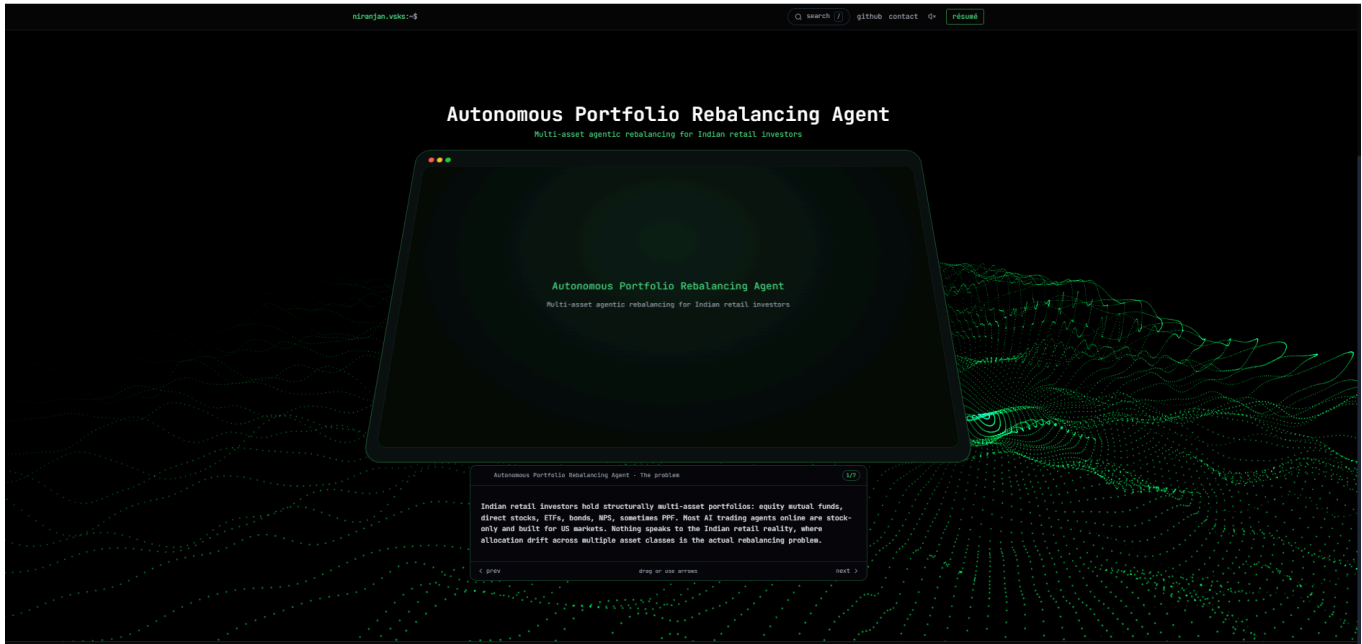

System Design

Product Design Section (Where we include Product Angle of it and Include a Few Product Frameworks)

View section (Screenshots, Give a professional looking name for this section) where if we have the live link , We provide ,if not we provide Screenshots of the Wireframes.

And the Github Repo of the Project if available .

Remove the Container Scroll altogether here .

Only for Saarthi (I will tell you for others when another project is both Mobile and Web Based) we will have mobile view and Web View . So We will have 2 view options in the mobile app , We already have the 3d Mockup animator in :

C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\remix-3d-mockup-animator

For this the container scroll is okay . We are showing a Mobile vs Web View so we might need this .

And for other pages we can just have the Slide Spectra template effect in this section .

I might have missed giving something I was supposed to or might be UX compatibility or key value mismatch etc.

For now I remember this . So I have bypassed some of the rules , More than 1 heavy WebGL in a couple of places. Because it is actually required to make some changes here.
