

New Portfolio Fixes Now

![[Pasted image 20260708135331.png

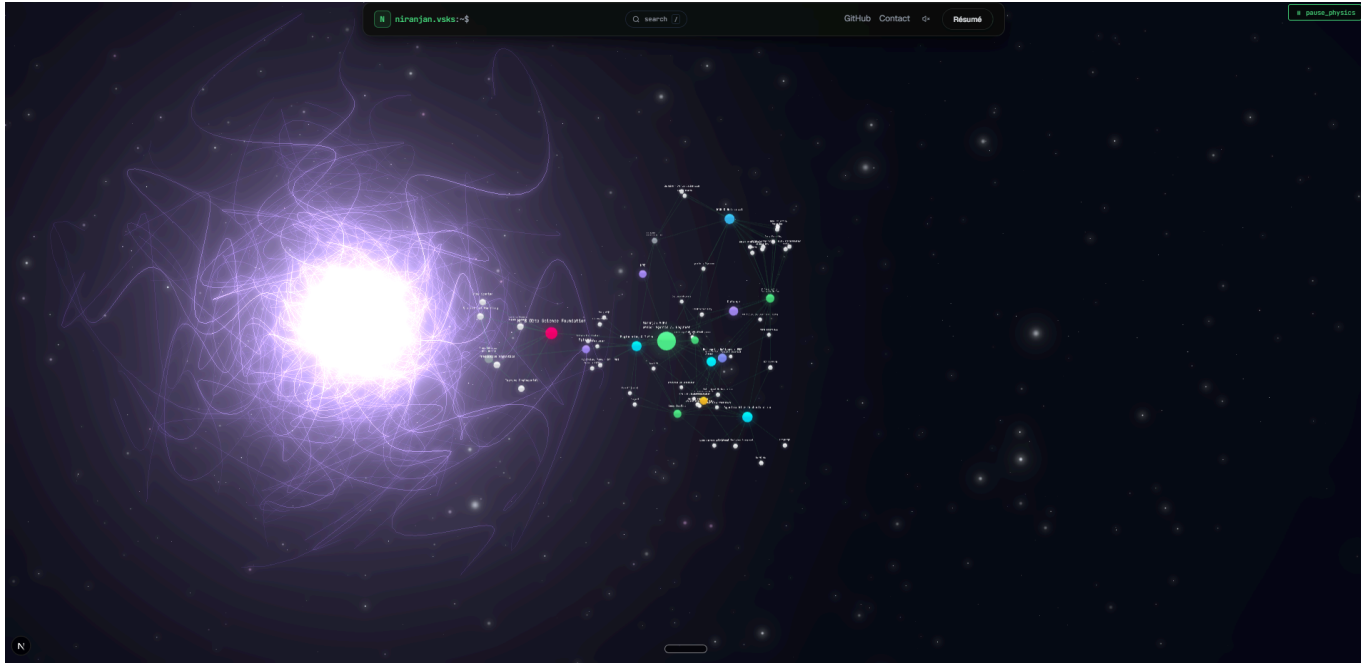

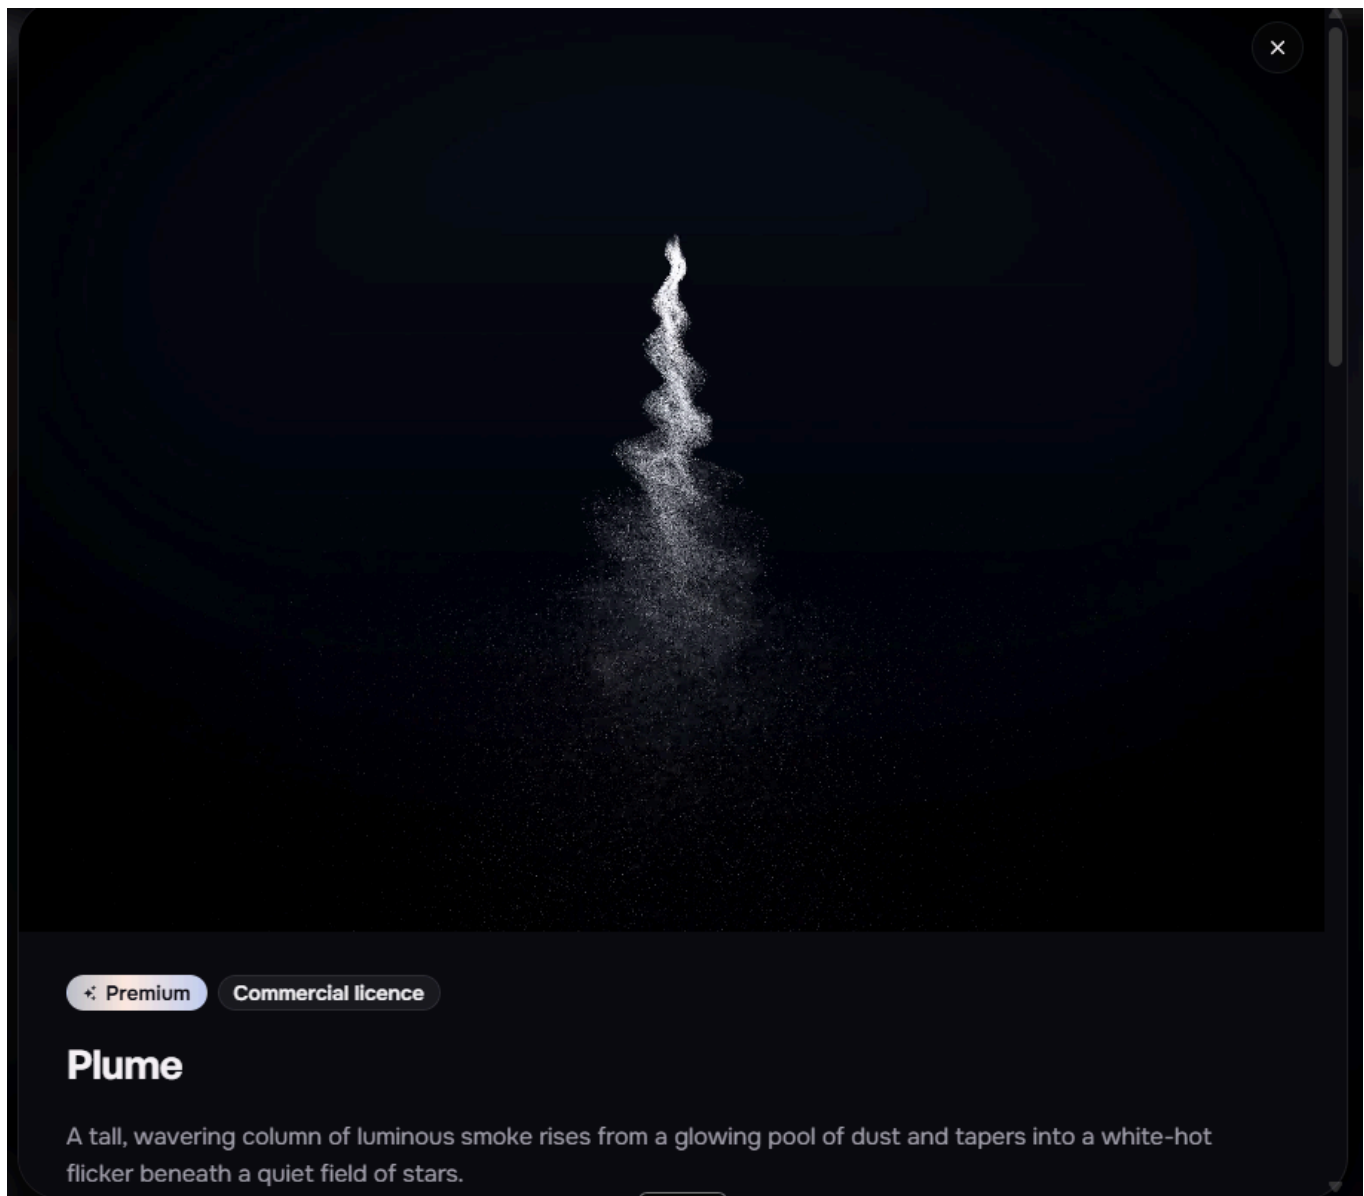

I am still getting 404 errors in The Clicks of these Nodes , I want that fixed end to end also the Zoom of the Relevant nodes and Clicking and Redirecting to pages (wherever applicable) on the nodes is not so smooth , Surgically fix it . The highlight animation is good , The Node We Click on , If it has sub nodes , then The Node and its highlighted nodes should be ZOOMED into focus and Even if other ones are out of focus its okay (I mean zoom it so that the centre part of the screen is focused on it , zoom in , if user scrolls left/right/top/bottom , he should still be able to access the other nodes , but the one he has clicked on should be zoomed in and

take the limelight is what I mean , but if that node has a specific page dedicated to it ,On click behavior should redirect to it without second thoughts

So the Ones which dont have any page to it are showing 404 but instead they should zoom in and be in focus . And Absolutely No 404 error.

Also One Simple and Critical Change , Remove the Plasma Burst , its too glaring to the eyes and is overshadowing the map in itself , And the Map must be Zoomed when it is shown it is showing too zoomed out view when the Brain transitions ,Instead , Add this Plume effect this is subtle , simple and doesnt glare just add this as an effect at the left keeping the starfield background as is and dont make the size of plume so big that it overshadows the mindmap .

The EXACT MASTER PROMPT OF PLUME IS IN C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\plume\plume_master_prompt.md

LANDING PAGE :

This was good but What I want is the Blue Ring like thing at the outline of earth is looking Weird and also the Globe of earth is not looking as hyperrealistic enough as the actual template. Fix that surgically without breaking anything else.

Also the UX with these cards is not at all Smooth , When We are building anything always think from a User Experience and User Comfort and Delight (Usually user is a recruiter who already sees 100s of portfolios and is frustrated so we gotta stand out). So the terminal cards are just randomly revolving mindlessly , now the one in focus in this screenshot is system design , Even if I click on it it is taking some Latency though , fix that if you can.

Also Lets say I want to go to Mindmap so I click on the mindmap card , which is Not in Focus now its at the left , But the Mindmap card is not coming to the centre to be in focus. Ideal UX is

that if I click an out of focus card , it takes whatever Clockwise revolutions it has to take and Comes to the focus , and the one in focus must expand in size a little with typewriter effect and sound , a one liner caption of that section should be shown , and if he is clicking on an already in focus card , then it must redirect to its page . Also I want a Forward Deployed Engineering Card and a Page where like System Design we Mention about what we achieved in terms of that , For example There can be sections like Architecting the AI Solution , Building the Production RAG Pipeline , Optimizing the RAG Pipeline , LLM Observability Layer , Finetuning RLHF / LoRA , Token Optimization Section, Cost Optimization , LLMops Related Stuff , Each Of them Can Have Cards Same Terminal Style Cards , But In a Grid Arrangement and its On Hover Action would be A Flip animation with the Same Terminal styling on the backside flip also with a 2 liner Description of that Section and On Click Behavior will be Redirecting to The Pages of it . So In those Pages , We would be explaining about what we worked on in that , for example RAG pipelines - What kinda Complex Techniques we used and Where We used it , And We can Say we used in XYZ project it maybe part of experience or independent , There will either be a Hyperlink of it or a Button Highlighted with the Name .

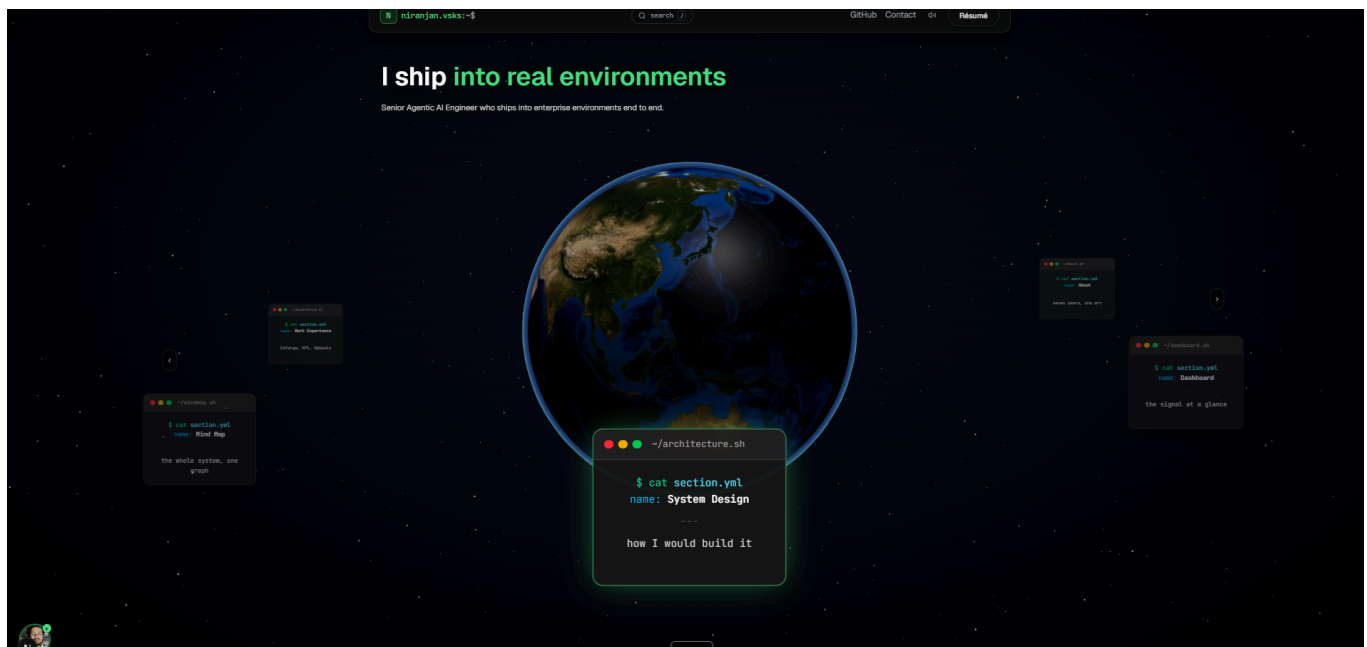

I Know there isnt a FDE.md Built but create one And Lets add it comprehensively based on the Context We Have in the Resume . Add it Make it comprehensive and positioned for a FDE Engineer end to end that can impress a Recruiter for now , I will change it if any changes later. Read the latest Resume (Niranjan_VSKS_FDE_P1 already in the Repo and Update it in the resume hyperlink and in the github hyperlink also , update this :

<https://github.com/niranjan-vsks>) and also read the MDs of the projects and Derive What You need to know about them and Refine the Framing and Add some detail from your end , For AI Infused QE Platform You can Add Stuff Like Load Balancer , Kubernetes , as well as Docker , RAGAS etc. Also Opensearch , S3 and Guardrails is also being used I shared a Few images of the Deployment Architecture for your reference , This is the Actual Coforge Architecture but Make sure not to Include the name Coforge Anywhere and If there are any internal tools names of Coforge dont include that .

So Similarly Do it for other Projects also from their respective md files. Saarthi.md , Rebalancer.md and Rename it to Autonomous Wealth Operating System Platform not Rebalancer

For example , Sentence is :

I have Implemented the use of this Reranking mechanism in [AI-Infused QE Platform] in [Coforge] , Now Both these words in The sentence must be Buttons , Which will Redirect to the Page and in fact the keywords will have to be highlighted as buttons and All of the keywords will be listed as tags as already existing and it must be Clickable which leads to the Node with that name in the Mindmap section , Zoomed and Focused (All the Keywords/Buzzwords must be having a Node to itself in the Mindmap)

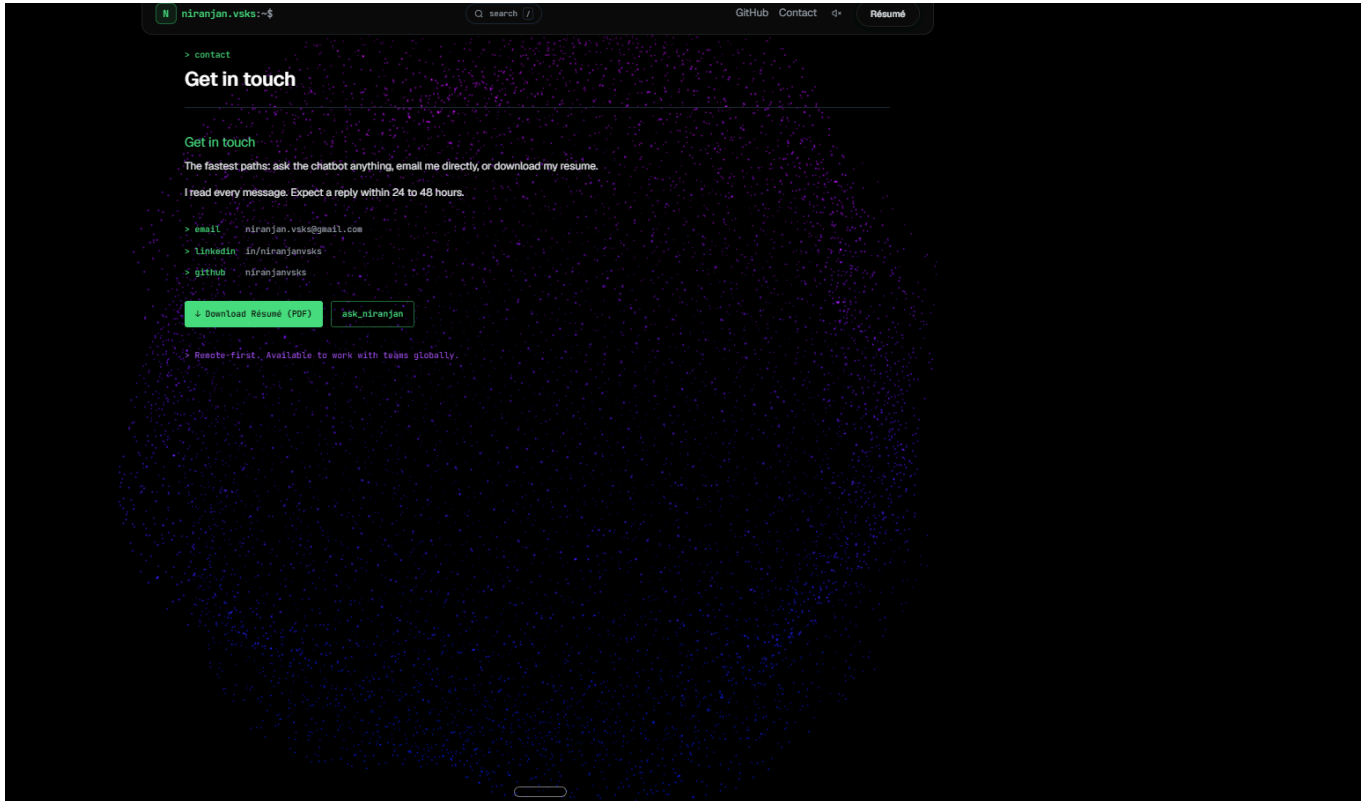

See How Realistic the Earth is looking here , in the actual template

The contact section is looking pretty bland and weak. Also if you are dedicating a separate page for that, we need something substantial to mention there so it is looking like a cheap placeholder. Right now it should look pretty premium and glossy.

Also the font is looking very cheap so use a better font style as well as the size must be increased. For the email, for the LinkedIn, as well as the GitHub, even if you have to introduce

some cards, introduce those cards but manually mentioning it on the page is looking very cheap. Also the download button is hitting on the eye so aesthetically it's not looking very good also also purple font on purple background is not looking very good. We need a contrasting color. When the background is particles, pair it with star dust or star field. The font must be contrasting. Either use neon green or neon orange or if you insist on magenta at least try not to blend in the background. You can use copper sulfate blue as well. That is a good color to use. You decide which color would be better to make it look premium.

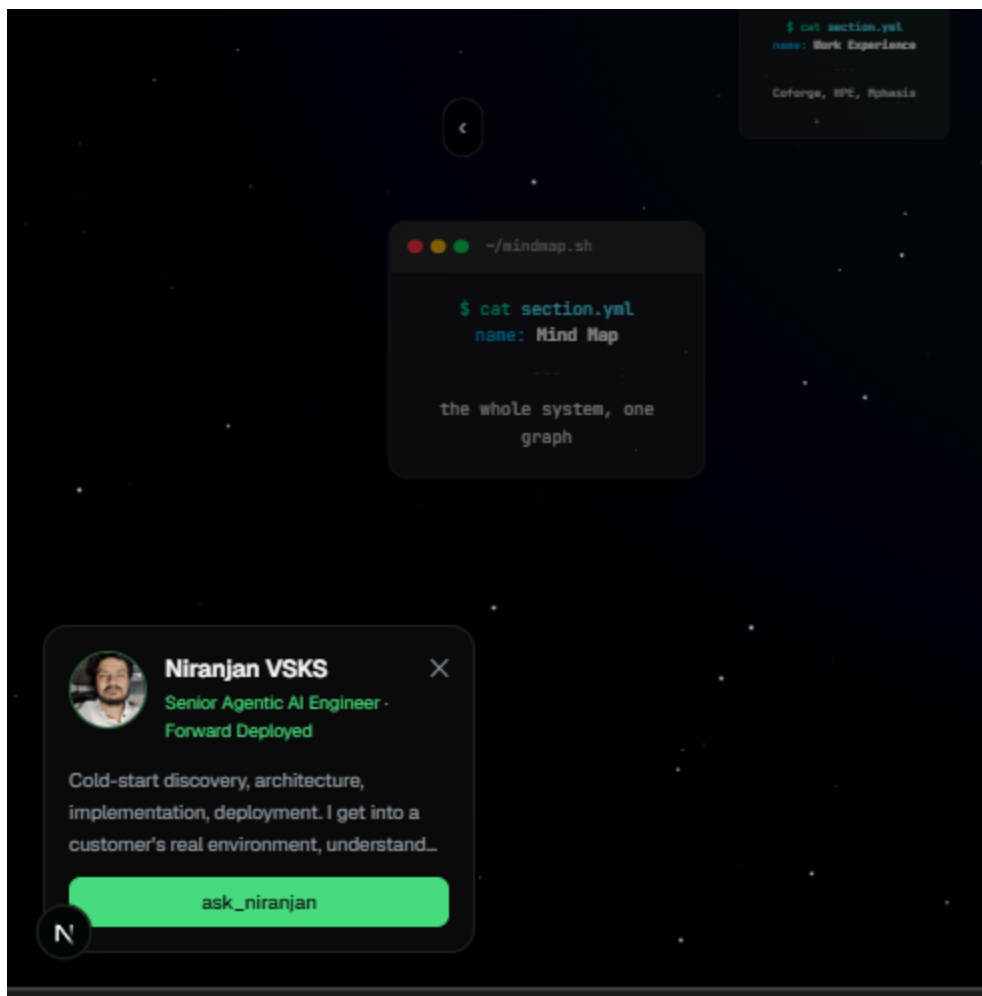

Also For the Photo I want You to Integrate the Starman Template directly . It is a Looping Video . and the Video and Poster is there in C:\Users\NIRANJAN VSKS\OneDrive\Desktop\Niranjan_Stuff\portfolio-nir\template_repos\textura_templates\star-man

Seamlessly integrate it directly . , Donot Reduce the Resolution , Donot adjust it or anything , Donot change the color or anything just integrate it as is , Just adjust the size to be proportionate with the photo section , as much space as it deserves to occupy , in the landing page , Make it a Collapsible Icon , and on expanding the starman template must popup . and a

Comic style dialog box with typewriter effect writing the summary.

Also Complete the remaining sections as planned , By adding Slider Spectra for Project pages except Saarthi .

For Sarthi I want a web view as well as a mobile view and for the mobile view I will be adding an iPhone mockup video in Saarthi's content folder in the repo . It must be a video animation. And in the video animation the wireframes of the Saarthi's actual wireframes must be showing.
